

# **BMS** INSTITUTE OF TECHNOLOGY AND MANAGEMENT

(Autonomous institution affiliated to VTU, Belagavi)  
Doddaballapur Road, Avalahalli, Yelahanka, Bengaluru 560064

## **M.Tech- Computer Science and Engineering**

### **Scheme and Syllabus**

**2022 Scheme**

# **Institute Vision**

**To emerge as one of the finest technical institutions of higher learning, to develop engineering professionals who are technically competent, ethical and environment friendly for betterment of the society.**

# **Institute Mission**

**Accomplish stimulating learning environment through high quality academic instruction, innovation and industry-institute interface.**

# **Department of Computer Science and Engineering**

## **VISION**

**To develop technical professionals acquainted with recent trends and technologies of computer science to serve as valuable resource for the nation/society.**

## **MISSION**

**Facilitating and exposing the students to various learning opportunities through dedicated academic teaching, guidance and monitoring.**

## **M.Tech in Computer Science and Engineering**

### **Program Educational Objectives (PEOs)**

- PEO1** Apply analytical thinking to solve problems through research in the areas of Computer Science and Engineering.
- PEO2** Adapt to changing technological trends through life-long learning by exhibiting professional ethics, integrity and career growth.
- PEO3** Develop skills to facilitate in providing sustainable solutions by addressing the ever-growing challenges of the society.

### **Program Outcomes (POs)**

- PO1** Independently carry out research and development work to solve practical problems related to Computer Science and Engineering domain.
- PO2** Write and present a substantial technical report/document.
- PO3** Demonstrate a degree of mastery over the area as per the specialization of the program. The mastery should be at a level higher than the requirements in the appropriate bachelor program.
- PO4** Analyze the acquired domain knowledge for providing feasible solution(s).
- PO5** Relate the learning outcomes to build requisite competency in professional environment.
- PO6** Appraise the need for engaging in lifelong learning.

## **About the Department**

The Department of Computer Science & Engineering was started in the year 2002 – 2003 with an intake of 60, the Year 2010 with an intake of 90 and currently it is 180. The Department is highly progressive and has a team of well qualified, experienced and dedicated faculty. 16 faculty members hold Doctoral degrees, and 18 Faculty members are currently pursuing their Doctorate degrees. The Department of Computer Science & Engineering continues to recruit faculty members with high experience in academics, industry, and research.

The Department has well-equipped computer laboratories for course work, teaching and to carry out projects. The servers and nodes are all connected in the network with all necessary licensed software. Exposure to cutting edge technologies is provided by means of Industrial Projects and technical talks from domain experts of reputed research organizations. The students are encouraged to involve themselves in creative, technical and research activities. Students have been performing well in the university examination.

The Department maintains a wireless network (Wi-Fi) with unlimited Internet access for use by staff and students. Our graduates are working in leading IT industries and many students have secured admissions to prestigious universities in India and abroad. The Department has an R&D Center as well as an Incubation Center which is facilitating the students to acquire practical knowledge. The Department also offers an M.Tech. Program (post-graduation) in Computer Science & Engineering, which was introduced in the year 2014 with an approved intake of 18.

## **About M.Tech in Computer Science and Engineering**

M.Tech (Computer Science and Engineering) commenced in the year 2014 with an intake of 18 students. The Post Graduate Program in Computer Science & Engineering is an affiliated program offered by Visvesvaraya

Technological University (VTU), Belagavi. The curriculum is designed by the university and has been common across all the institutions affiliated to it. Highly experienced faculty members with doctoral degrees handle the courses for this program. The program is accredited by National Board of Accreditation (NBA) till Jun 2024. This is only PG program in the state of Karnataka to have got accreditation in the first attempt under Tier II.

Students and faculty members are proactively involved in high end research activities and have published impetus research publications in domains of Computer Network, Network Security, AI and Data Science. Students undergo 8 weeks industrial internship in many reputed companies like Nokia, Siemens, Robert Bosch, Phillips and many more. Many students are aspirant of the higher studies (Ph.D.) in various domains

## **PREAMBLE**

In keeping abreast with India's recent National Education Policy (NEP 2020), the Indian Institute of Science, Bengaluru, has designed the Master of Technology (Online) degree program, for practicing engineers and scientists. Towards the attainment of such a holistic and multidisciplinary education, the flexible and innovative curriculum has been provided at BMSIT&M with credit-based courses and projects/internships/special courses in the areas of community engagement and public service, environmental education, and value-based education.

The emphasis is more on the core competency in the curriculum of the program to enhance opportunities for placement through industry relevant courses as program core and program electives. This is effectively attained with proper design, operation and improvement in academic components in the system with inclusive focus on Modern teaching methods, advanced curricula, innovative assessment methods, research temperament, industry associated curriculum. Implementation of academic autonomy can be with supportive governance and administrative structure is properly planned and put in place.

Curricular inputs for the framework are from all the stakeholders involved in the academic process and referring curriculum from standard and well-known universities/colleges. Input for the framework is also from professional bodies like IEEE and CSI which recommends the advanced courses for the PG program of 2 years. The expected learning outcomes of autonomous curriculum of BMSIT&M caters to the aspiration of learner in-terms of higher education, research, industry requirements. Develop learner's inquisitiveness and focus on research and development of disruptive technologies. Incorporation of ICT tools imperatively blended in the autonomous curricula reaching all class of learners.

With this preamble, the curricula for the autonomous BMSIT&M has been designed to meet the contemporary needs (aspirations) of primary stakeholders (students) with the following.

### **Salient features**

1. **Inclusion of NEP 2020:** The aspiration of NEP 2020 and various levels has been incorporated in the M.Tech Computer Science Engineering (Autonomous) with inclusive focus on practical work, industrial internship, emphasis on research to solve the societal issues and latest trends as courses.
2. **Induction Programme:** There will be a week-long induction program for the PG students entering the institution. The incumbents learn about the institutional policies, processes, practices, culture and values.
3. **Post Graduate Program Outcomes (PO) Based Curriculum:** The curricula for the program is designed to meet the post graduate attributes (Program Outcomes) defined by National Board of Accreditation which are based on the knowledge, research, skill, ethics and higher learning.

4. **Emphasis on Research Project Based Learning:** To impart the skills to the prospective researcher, the emphasis on practical sessions is extended in the curricula for all the programs. At each semester, the adequate amount of practical/laboratory courses are included. Further, some of the theory courses are blended with practical as integrated course.
5. **Industry exposure through Mini projects and Internships:** The curricula includes industry internships and mini projects for the students to expose them to the real-world experience at industrial environment. Mini projects expose to better technical articulation and project cycles.
6. **Self-Learning:** The curriculum provides with an opportunity for the students to take the initiative, with or without the assistance of others, in diagnosing their learning needs, formulating learning goals, identifying human and material resources for learning, and evaluating learning outcomes.
7. **Multiple avenues based on aspirations of the students:** The students will study the program specific courses for two years. There are three major avenues for the aspiring students to pursue:
  - **Industry/Placement:** The students who are aspiring to work as professional engineers in their core industrial domain have the option of studying the courses in the curriculum which are aligned towards the placement opportunities.
  - **Research:** The curriculum provides an opportunity for the students to pursue the courses which are in support of higher learning enabling the learner to do research work in the desired domain of interest.
  - **Presentation and Articulation:** The curriculum provides opportunities to present flexible assessment method for the course which improves communication and expect document this as report

## Credit Distribution of M. Tech Computer Science and Engineering (Autonomous-2022)

SEM	AEC	BS	PC	PE	PW	INT	MCC	Total Credits

- **Audit Courses /Ability Enhancement Courses Suggested by BOS (ONLINE courses):** Audit Courses: These are prerequisite courses suggested by the Joint Board of Studies (CSE/ISE/AIML) . Ability Enhancement Courses will be suggested by the BoS if prerequisite courses are not required for the programs. Ability Enhancement Courses:
  - These courses are prescribed to help students to enhance their skills in in fields connected to the field of specialisation as well allied fields that leads to employable skills. Involving in learning such courses are impetus to lifelong learning.
  - The courses under this category are online courses published in advance and approved by the concerned Board of Studies.
  - Registration to Audit /Ability Enhancement Course shall be done in consultation with the mentor and is compulsory during the concerned semester.
  - In case a candidate fails to appear for the proctored examination or fails to pass the selected online course, he/she can register and appear for the same course if offered during the next session or register for a new course offered during that session, in consultation with the mentor.
  - The Audit Ability Enhancement Course carries no credit and is not counted for vertical progression. However, a pass in such a course is mandatory for the award of the degree.

- **MOOCs:** Students can choose any course related to the domain / program which is for 2 credits (26 hours to 30 hours and 12-14 weeks course). The course can be from NPTEL, Coursera, Udemy or any other leading platform with examination and assessments. The web link for few courses listed in the various platforms is given below
  - NOC | Computer Science and Engineering (nptel.ac.in) - <https://nptel.ac.in/noc/courses/106/>
  - Top Online Courses and Specializations | Coursera - <https://www.coursera.org/courses>
- **Mini Project with Seminar:** This may be hands-on practice, survey report, data collection and analysis, coding, mobile app development, field visit and report preparation, modelling of system, simulation, analysing and authenticating, case studies, etc. CIE marks shall be awarded by a committee comprising of HoD as Chairman, Guide/co-guide, if any, and a senior faculty of the department. Students can present the seminar based on the completed mini-project. Participation in the seminar by all postgraduate students of the program shall be **mandatory**. The CIE marks awarded for Mini-Project work and Seminar, shall be based on the evaluation of Mini Project work and Report, Presentation skill and performance in Question and Answer session in the ratio 50:25:25. Mini-Project with Seminar shall be considered as a head of passing and shall be considered for vertical progression as well as for the award of degree. Those, who do not take-up/complete the Mini Project and Seminar shall be declared as fail in that course and have to complete the same during the subsequent semester. There is *no SEE* for this course.

SEE shall be at the end of IV semester. Project work evaluation and Viva-Voce examination (SEE), after satisfying the plagiarism check (below 20%).

# **SEMESTER - I**

<b>M.TECH COMPUTER SCIENCE AND ENGINEERING</b>			
Choice Based Credit System (CBCS)			
SEMESTER - I			
<b>Applied Mathematics (2:2:0) 4</b>			
(Effective from the academic year 2022-23)			
Course Code	22MAT11	CIE Marks	50
Teaching Hours/Week (L:T:P)	2:2:0	SEE Marks	50
Total Number of Contact Hours	50	Exam Hours	3
<b>Course Objectives:</b>			
This course will enable students to:			
1. Have an insight into statistical methods.			
2. Apply the concept of probability distribution of discrete and continuous random variables.			
3. Apply the concept of various graphs and Vector Spaces.			
4. Analyze the statistical data for testing of hypothesis and to draw the conclusions.			
<b>Module - 1</b>			
<b>Preamble:</b> Significance and Scope of the course, Importance of the course in societal, political and economic growth of the nation, Impact of the course on societal and ethical issues and career perspective.			
<b>Introduction:</b> Understanding of Vector spaces, graph theory, Statistical models & their applications in Engineering, Economics and Statistics.			
<b>Linear Algebra-I</b>			
<b>Vector Spaces:</b> Vector spaces; subspaces Linearly independent and dependent vectors, Basis and dimension, coordinate vectors-Illustrative examples. Linear transformations, Representation of transformations by matrices.			
(10 hours)			
<b>Module - 2</b>			
<b>Linear Algebra-II</b>			
Computation of Eigen values and Eigen vectors of real symmetric matrices-Jacobi and Given's method. Orthogonal vectors and orthogonal basis. Gram-Schmidt orthogonalization process. QR decomposition, singular value decomposition.			
(10 hours)			
<b>Module - 3</b>			
<b>Statistical Inference:</b> Introduction to multivariate statistical models: Correlation and Regression analysis, Curve fitting (Linear and Non linear).			
(10 hours)			
<b>Module - 4</b>			
<b>Number Theory:</b> Divisibility, GCD, Euclidean algorithm, Congruences, Linear Congruences, The Chinese Remainder theorem, Solving Polynomials, Linear Diophantine Equation, System of Linear Congruences, Euler's Theorem, Wilson Theorem and Fermat's little theorem			
(10 hours)			
<b>Module - 5</b>			
<b>Probability Theory:</b> Random variable (discrete and continuous), Probability mass function (pmf), Probability density function (pdf), Mathematical expectation, Sampling theory: testing of hypothesis by <i>t</i> -test, z- test.			
<b>Summary of the Course</b>			
(10 hours)			

**Course outcomes:** The students will be able to

- C01: Apply probability formulations for new predictions with discrete and continuous RV's.
- C02: Solve the vector spaces and related topics arising in magnification and rotation of images.
- C03: demonstrate knowledge and critical understanding of the well-established principles within Number Theory;
- C04: Apply the statistical tools in multi variable distributions.
- C05: Summarize the Numerical and Statistical tools using programming

**Question paper pattern:**

- **SEE** will be conducted for 100 marks.
- Each full question is for 20 marks. (Answer five full questions out of 10 questions with intra modular choice). In every question, there will be a maximum of three sub-questions.
- **CIE** will be announced prior to the commencement of the course.
- 25 marks for test. Average of three tests will be taken.
- 25 marks for Flexible Assessment Method.

**Textbooks:**

## M.TECH COMPUTER SCIENCE AND ENGINEERING

Choice Based Credit System (CBCS)

SEMESTER – I

### Research Methodology and Intellectual Property Rights (3:0:0) 3

(Effective from the academic year 2022 -2023)

Course Code	22MCC12	CIE Marks	50
Teaching Hours/Week (L:T:P)	3:0:0	SEE Marks	50
Total Number of Contact Hours	40	Exam Hours	3

#### Course Objectives:

This course will enable students to:

1. Give an overview of the research methodology and explain the technique of defining a research problem.
2. Explain the functions of the literature review in research and carry out a literature search, its review and develop theoretical and conceptual frameworks.
3. Explain various research designs, sampling designs, and also different methods of data collections.
4. Understand hypothesis and chi- square test.
5. Develop the art of interpretation and the art of writing different research reports.
6. Explain various forms of the intellectual property, its relevance and business impact in the changing global business environment.

#### Module – 1

**Introduction:** Significance and Scope of the course, Importance of the course in societal, political and economic growth of the nation, Impact of the course on societal and ethical issues and career perspective.

**Research Methodology:** Introduction, Meaning of Research, Objectives of Research, Motivation in Research, Types of Research, Research Approaches, Significance of Research, Research Methods versus Methodology, Research and Scientific Method, Importance of Knowing How Research is Done, Research Process, Criteria of Good Research, and Problems Encountered by Researchers in India.

**Defining the Research Problem:** Research Problem, Selecting the Problem, Necessity of Defining the Problem, Technique Involved in Defining a Problem, An Illustration.

(8 Hours)

#### Module – 2

**Reviewing the literature:** Place of the literature review in research, bringing clarity and focus to your research problem, Improving research methodology, Broadening knowledge base in research area, Enabling contextual findings, How to review the literature, searching the existing literature, reviewing the selected literature, Developing a theoretical framework, Developing a conceptual framework, Writing about the literature reviewed.

**Research Design:** Meaning of Research Design, Need for Research Design, Features of a Good Design, Important Concepts Relating to Research Design, Different Research Designs, Basic Principles of Experimental Designs, Important Experimental Designs.

(8 Hours)

### Module - 3

**Design of Sampling:** Introduction, Sample Design, Sampling and Non-sampling Errors, Sample Survey versus Census Survey, Types of Sampling Designs.

**Measurement and Scaling:** Qualitative and Quantitative Data, Classifications of Measurement Scales, Goodness of Measurement Scales, Sources of Error in Measurement Tools, Scaling, Scale Classification Bases, Scaling Technics, Multidimensional Scaling, Deciding the Scale.

**Data Collection:** Experimental and Surveys, Collection of Primary Data, Collection of Secondary Data, Selection of Appropriate Method for Data Collection, Case Study Method

(8 Hours)

### Module - 4

**Testing of Hypotheses:** Hypothesis, Basic Concepts Concerning Testing of Hypotheses, Testing of Hypothesis, Test Statistics and Critical Region, Critical Value and Decision Rule, Procedure for Hypothesis Testing, Hypothesis Testing for Mean, Proportion, Variance, for Difference of Two Mean, for Difference of Two Proportions, for Difference of Two Variances, P-Value approach, Power of Test, Limitations of the Tests of Hypothesis.

**Chi-square Test:** Test of Difference of more than Two Proportions, Test of Independence of Attributes, Test of Goodness of Fit, and Cautions in Using Chi Square Tests.

(8 Hours)

## Module – 5

**Interpretation and Report Writing:** Meaning of Interpretation, Technique of Interpretation, Precaution in Interpretation, Significance of Report Writing, Different Steps in Writing Report, Layout of the Research Report, Types of Reports, Oral Presentation, Mechanics of Writing a Research Report, Precautions for Writing Research Reports

**Intellectual Property:** The Concept, Intellectual Property System in India, Development of TRIPS Complied Regime in India, Patents Act, 1970, Trade Mark Act, 1999, The Designs Act, 2000, The Geographical Indications of Goods (Registration and Protection) Act 1999, Copyright Act, 1957, The Protection of Plant Varieties and Farmers' Rights Act, 2001, The Semi-Conductor Integrated Circuits Layout Design Act, 2000, Trade Secrets, Utility Models, IPR and Biodiversity, The Convention on Biological Diversity (CBD) 1992, Competing Rationales for Protection of IPRs, Leading International Instruments Concerning IPR, World Intellectual Property Organisation (WIPO), WIPO and WTO, Paris Convention for the Protection of Industrial Property, National Treatment, Right of Priority, Common Rules, Patents, Marks, Industrial Designs, Trade Names, Indications of Source, Unfair Competition, Patent Cooperation Treaty (PCT), Advantages of PCT Filing, Berne Convention for the Protection of Literary and Artistic Works, Basic Principles, Duration of Protection, Trade Related Aspects of Intellectual Property Rights (TRIPS) Agreement, Covered under TRIPS Agreement, Features of the Agreement, Protection of Intellectual Property under TRIPS, Copyright and Related Rights, Trademarks, Geographical indications, Industrial Designs, Patents, Patentable Subject Matter, Rights Conferred, Exceptions, Term of protection, Conditions on Patent Applicants, Process Patents, Other Use without Authorization of the Right Holder, Layout-Designs of Integrated Circuits, Protection of Undisclosed Information, Enforcement of Intellectual Property.

**Recap / Summary of the Course**

**(8 Hours)**

**Course Outcomes:** The student will be able to:

- CO1: Understand the concepts of research methodology, research problem and literature review.
- CO2: Understand various forms of the intellectual property rights, its relevance and business impact in the changing global business environment and leading International Instruments concerning IPR.
- CO3: Analyze various research designs, sampling designs, measurement and scaling techniques and different methods of data collections.
- CO4: Apply several parametric tests of hypotheses.
- CO5: Develop the art of interpretation and writing research reports.

**Question paper pattern:**

- **SEE** will be conducted for 100 marks.
- Each full question is for 20 marks. (Answer five full questions out of 10 questions with intra modular choice). In every question, there will be a maximum of three sub-questions.
- **CIE** will be announced prior to the commencement of the course.
- 25 marks for test. Average of three tests will be taken.
- 25 marks for Flexible Assessment Method.

Total Number of Contact Hours	40	Exam Hours	3

**Course Objectives:**

This course will enable students to:

1. Apply the basic principles, models, and algorithms of AI
2. Recognize, model, and solve problems in the analysis and design of information systems.
3. Analyze the structures and algorithms of a selection of techniques related to searching, reasoning, machine learning, and language processing.

**Module - 1**

**Introduction:** Significance and Scope of the course, Importance of the course in societal, political and economic growth of the nation, Impact of the course on societal and ethical issues and career perspective.

**Intelligent agents:** Reactive, Deliberative, Goal-driven, Utility-driven, and Learning agents  
Artificial Intelligence programming techniques

(9 Hours)

**Module - 2**

**Problem-solving through Search:** Forward and backward, State-space, Bind, heuristic, Problem-reduction, A, A\*, AO\*, minimax, constraint propagation, neural, stochastic, and evolutionary search algorithms.

(8 Hours)

**Module - 3**

**Knowledge Representation and Reasoning:** ontologies, foundations of knowledge representation and reasoning, representing and reasoning about objects, relations, events, actions, time, and space; predicate logic, situation calculus, description logics, reasoning with defaults, reasoning about knowledge.

(7 Hours)

**Module - 4**

**Representing and Reasoning with Uncertain Knowledge:** probability, connection to logic, independence, Bayes rule, Bayesian networks, probabilistic inference. **Decision-Making:** basics of utility theory, decision theory, sequential decision problems, elementary game theory.

(7 Hours)

**Module - 5**

**Machine Learning and Knowledge Acquisition:** Learning from memorization, examples, explanation, and exploration. Learning nearest neighbor, naive Bayes, and decision tree classifiers, Q-learning for learning action policies, applications.

**Recap/Summary:** In this course students will study about Introduction to Artificial Intelligence, Problem solving through many search techniques Knowledge representation and reasoning.

(9 Hours)

**Course Outcomes:** The students will be able to:

- CO1: Illustrate basic principles and applications of Artificial Intelligence.
- CO2: Apply the different search algorithms for problem solving.
- CO3: Analyse the knowledge representation and reasoning with different decision making theory.
- CO4: Appraise the Machine Learning and Artificial Intelligence techniques for real solving Real world problems.

**Question paper pattern:**

- **SEE** will be conducted for 100 marks.
- Each full question is for 20 marks. (Answer five full questions out of 10 questions with intra modular choice). In every question, there will be a maximum of three sub-questions.
- **CIE** will be announced prior to the commencement of the course.
- 25 marks for test. Average of three tests will be taken.
- 25 marks for Flexible Assessment Method.

**Textbooks:**

1. Kevin Knight, Elaine Rich and B. Nair, Artificial Intelligence, Third Edition, 2017.
2. Stuart Russell and Peter Norvig, Artificial Intelligence: A Modern Approach, Fourth Edition, 2020.

**References:**

1. FLASINSKI M, Introduction to Artificial Intelligence, SPRINGER 2017.

<b>M.Tech Computer Science and engineering</b> Choice Based Credit System (CBCS) Semester – I			
<b>Internet of Things and Applications (3:0:0) 3</b> (Effective from the academic year 2022 -23)			
Course Code	22MCS14	CIE Marks	50
Teaching Hours/Week (L:T:P)	3:0:0	SEE Marks	50
Total Number of Lecture Hours	40	Exam Hours	3
<b>Course objectives:</b>			
This course will enable students to:			
1. Understand the fundamentals of Internet of Things.			
2. Learn about the basics of IOT protocols.			
3. Apply the concept of Internet of Things in the real world scenario.			
4. Build a small low cost embedded system using Raspberry Pi.			
<b>Module – 1</b>			
<b>Preamble:</b> Significance and Scope of the course, Importance of the course in societal, political and economic growth of the nation, Impact of the course on societal and ethical issues and career perspective.			
Internet of Things (IoT) is presently a hot technology worldwide. Government, academia, and industry are involved in different aspects of research, implementation, and business with IoT . The Internet of Things (IoT) is a course about the new paradigm of objects interacting with people, with information systems, and with other objects. Important to learn the fundamentals of this emerging technology.			
<b>INTRODUCTION TO IoT :</b> What is The Internet of Things? Overview and Motivations, Examples of Applications, IPV6 Role, Areas of Development and Standardization, Scope of the Present Investigation. Internet of Things Definitions and frameworks-IoT Definitions, IoT Frameworks, Basic Nodal Capabilities. Internet of Things Application Examples- Overview, Smart Metering/Advanced Metering Infrastructure-Health/Body Area Networks, City Automation, Automotive Applications, Home Automation, Smart Cards, Tracking, Over-The-Air-Passive Surveillance/Ring of Steel, Control Application Examples, Myriad Other Applications.			
(8 Hours)			
<b>Module – 2</b>			
Fundamental IoT Mechanism and Key Technologies-Identification of IoT Object and Services, Structural Aspects of the IoT, Key IoT Technologies. Evolving IoT Standards- Overview and Approaches, IETF IPV6 Routing Protocol for RPL Roll, Constrained Application Protocol, Representational State Transfer, ETSI M2M, Third Generation Partnership Project Service Requirements for Machine-Type Communications, CENELEC, IETF IPV6 Over Low power WPAN, Zigbee IP(ZIP), IPSO			
(8 Hours)			
<b>Module – 3</b>			
Layer ½ Connectivity: Wireless Technologies for the IoT-WPAN Technologies for IoT/M2M, Cellular and Mobile Network Technologies for IoT/M2M. Case Studies illustrating IoT Design-Introduction, Home Automation, Cities, Environment, Agriculture, Productivity Applications.			
(8 Hours)			
<b>Module – 4</b>			

Data Analytics for IoT – Introduction, Apache Hadoop, Using Hadoop MapReduce for Batch Data Analysis, Apache Oozie, Apache Spark, Apache Storm, Using Apache Storm for Realtime Data Analysis, Structural Health Monitoring Case Study.

(8 Hours)

### Module - 5

BUILDING IoT WITH RASPBERRY PI & ARDUINO: IoT Physical Devices & Endpoints – What is IoT Device –Exemplary devices :Raspberry Pi –About the Board - Linux on Raspberry Pi - Raspberry Pi Interfaces -Programming Raspberry Pi with Python - Other IoT Platforms .

**Recap:** Summary of the Course

(8 Hours)

**Course Outcomes:** The students will be able to

- CO1: Understand the concepts of Internet of Things.
- CO2: Illustrate basic framework used in IoT architecture.
- CO3: Identify functionality and usage of various protocols in IoT architecture.
- CO4: Analyse applications of IoT in real time scenario.
- CO5: Design a portable IoT using Rasperry Pi.

**Question paper pattern:**

- **SEE** will be conducted for 100 marks.
- Each full question is for 20 marks. (Answer five full questions out of 10 questions with intra modular choice). In every question, there will be a maximum of three sub-questions.
- **CIE** will be announced prior to the commencement of the course.
- 25 marks for test. Average of three tests will be taken.
- 25 marks for Flexible Assessment Method.

**Textbooks:**

- 1.Arshdeep Bahga, Vijay Madiseti, Internet of Things: A hands-on approach, Universities Press,2015.
2. Daniel Minoli, "Building the Internet of Things with IPv6 and MIPv6:The Evolving World of M2MCommunications", Wiley, 2013.

<b>M.Tech COMPUTER SCIENCE AND ENGINEERING</b>			
Choice Based Credit System (CBCS)			
SEMESTER – I			
<b>Advanced Data structures and Algorithms (3:0:2) 4</b>			
(Effective from the academic year 2022-23)			
Course Code	22MCS15	CIE Marks	50
Teaching Hours/Week (L:T:P)	3:0:2	SEE Marks	50
Total Number of Contact Hours	40+26	Exam Hours	3
<p>Course Objectives: This course will enable students to:</p> <ol style="list-style-type: none"> <li>1. Explain principles of algorithms analysis approaches</li> <li>2. Compare and contrast number theoretic based strategies.</li> <li>3. Describe data flow in networks using graph algorithms.</li> <li>4. Design and implement optimization algorithms in specific applications.</li> </ol>			
<b>Module – 1</b>			
<p><b>Preamble:</b> Significance and Scope of the course, Importance of the course in societal, political and economic growth of the nation, Impact of the course on societal and ethical issues and career perspective.</p> <p>Advanced Algorithms introduces a collection of algorithms for complex programming challenges in data analysis. Advanced Algorithms teaches you powerful approaches to a wide range of tricky coding challenges that you can adapt and apply to your own applications.</p> <p>Elementary Data Structures, Binary Search Trees. Hashing: Open Hashing (Separate chaining), Closed Hashing (Open Addressing)</p> <p style="text-align: right;">(9 Hours)</p>			
<p><b>Lab Programs:</b></p> <ol style="list-style-type: none"> <li>1. Programs to implement various data structures (Stacks, Queues, Linked Lists, Trees)</li> </ol>			
<b>Module – 2</b>			
<p><b>Review of Analysis Techniques:</b> Growth of Functions: Asymptotic notations; Standard notations and common functions; Recurrences and Solution of Recurrence equations- The substitution method, The recurrence – tree method, The master method; Amortized Analysis: Aggregate, Accounting and Potential Methods.</p> <p style="text-align: right;">(7 Hours)</p>			
<b>Module – 3</b>			
<p><b>Graph Algorithms:</b> Bellman - Ford Algorithm; Single source shortest paths in a DAG; Johnson's Algorithm for sparse graphs; Flow networks and Ford-Fulkerson method;</p> <p><b>Advanced Data Structures:</b> AVL Trees, 2-3 trees</p> <p style="text-align: right;">(7 Hours)</p>			
<p><b>Lab Programs:</b></p> <ol style="list-style-type: none"> <li>1. Program to implement Ford-Fulkerson method.</li> <li>2. Program to implement Johnson's Algorithm.</li> </ol>			
<b>Module – 4</b>			
<p><b>Number -Theoretic Algorithms:</b> Elementary notions; GCD; Modular Arithmetic; Solving modular linear equations; The Chinese remainder theorem; Powers of an element; RSA cryptosystem; Primality testing; Integer factorization</p> <p style="text-align: right;">(8 Hours)</p>			
<p><b>Lab Programs:</b></p> <ol style="list-style-type: none"> <li>1. Program to implement RSA algorithm.</li> </ol>			

## Module – 5

**String-Matching Algorithms:** Naïve string Matching; Rabin - Karp algorithm; String matching with finite automata; Knuth-Morris-Pratt algorithm; Boyer – Moore algorithms.

**Advanced Data Structures:** Red-Black trees: properties of red-black trees, rotations and insertion.

### Lab Programs:

- 1.Program to implement Naive algorithm.
- 2.Program to implement Rabin - Karp algorithm.
- 3.Program to implement Boyer – Moore algorithm.

**Summary:** Overview of various techniques / algorithms that can be adopted to any application. (9 Hours)

**Course Outcomes:** The students will be able to:

- C01: Describe efficient algorithms for a range of computational problems, along with their computational complexity.
- C02: Choose the suitable algorithm for any given task.
- C03: Analyze a variety of algorithms with application to real-world problems.
- C04: Identify an appropriate way of dealing with challenging computational problems.
- C05: Interpret the working of algorithms various algorithms using a suitable programming language

### Question paper pattern:

- **SEE** will be conducted for 100 marks.
- Each full question is for 20 marks. (Answer five full questions out of 10 questions with intra modular choice). In every question, there will be a maximum of three sub-questions.
- **CIE** will be announced prior to the commencement of the course.
- 25 marks for test. Average of three tests will be taken.
- 25 marks for Flexible Assessment Method.

### Textbooks:

**M. Tech COMPUTER SCIENCE AND ENGINEERING**

Choice Based Credit System (CBCS)

SEMESTER – I

**Advanced Computer Networks and Security (3:2:0)4**

(Effective from the academic year 2022-23)

Course Code	22MCS16	CIE Marks	50
Teaching Hours/Week (L:T:P)	3:2:0	SEE Marks	50
Total Number of Contact Hours	40	Exam Hours	3

**Course Objectives:**

This course will enable students to:

1. Gain knowledge of the various aspects of network architecture and protocols, Network performance
2. Understand effective communication mechanisms
3. Students will learn about the issues in 802.11 LANs
4. Learn various congestion control algorithms.

**Module – 1**

**Introduction:** Significance and Scope of the course, Importance of the course in societal, political and economic growth of the nation, Impact of the course on societal and ethical issues and career perspective.

**Foundation:** Building a Network, Requirements, Perspectives, Scalable Connectivity, Cost-Effective Resource sharing, Support for Common Services, Manageability, Protocol layering, Performance, Bandwidth and Latency, Delay X Bandwidth Product, Perspectives on Connecting, Classes of Links, Reliable Transmission, Stop-and-Wait, Sliding Window, Concurrent Logical Channels.

(8 Hours)

**Module – 2**

**Internetworking I:** Basic Internetworking (IP), What is an Internetwork?, Service Model, Global Addresses, Datagram Forwarding in IP, subnetting and classless addressing, Address Translation (ARP), Host Configuration (DHCP), Error Reporting (ICMP), Virtual Networks and Tunnels. **Internetworking- II:** Network as a Graph, Distance Vector (RIP), Link State (OSPF), Metrics, The Global Internet, Routing Areas, Routing among Autonomous systems (BGP), IP Version 6 (IPv6), Mobility and Mobile IP.

(8 Hours)

**Module – 3**

**WiFi:** 802.11, Wireless LANs, The 802.11 Architecture, The 802.11 MAC Protocol, The IEEE 802.11 Frame, Mobility in the Same IP Subnet, Advanced Features in 802.11, Personal Area Networks: Bluetooth and Zigbee, Cellular Internet Access, An Overview of Cellular Network Architecture, 3G Cellular Data Networks: Extending the Internet to Cellular Subscribers, On to 4G: LTE, Mobility Management: Principles, Addressing, Routing to a Mobile Node, Mobile IP, Managing Mobility in Cellular Networks, Routing Calls to a Mobile User, Handoffs in GSM, Wireless and Mobility Impact on Higher-Layer Protocols

(8 Hours)

**Module – 4**

**Overview of Network Security:** Cryptographic Building Blocks, Principles of Ciphers, Symmetric-Key Ciphers, Public-Key Ciphers, Authenticators, key Predistribution, Predistribution of Public Keys, Predistribution of Symmetric Keys, Authentication Protocols, Originality and Timeliness Techniques,

(8 Hours)

### Module - 5

**Authentication and others:** Public-Key Authentication Protocols, Symmetric-Key Authentication Protocols, Diffie-Hellman Key Agreement, Example Systems, Pretty Good Privacy (PGP), Secure Shell (SSH), Transport Layer Security (TLS, SSL, HTTPS), IP Security (IPsec), Wireless Security (802.11i), Firewalls, Strengths and Weaknesses of Firewalls

**Recap/Summary** of the course.

(8 Hours)

#### Course Outcomes:

The student will be able to

**C01:** Apply various protocols to develop applications using the sockets API.

**C02:** Demonstrate effective communication mechanisms in computer networks

**C03:** Analyze the concepts and issues in Mobile and Wireless Networks.

**C04:** Examine possible research opportunities and challenges within the network application and security.

#### Question paper pattern:

- **SEE** will be conducted for 100 marks.
- Each full question is for 20 marks. (Answer five full questions out of 10 questions with intra modular choice). In every question, there will be a maximum of three sub-questions.
- **CIE** will be announced prior to the commencement of the course.
- 25 marks for test. Average of three tests will be taken.
- 25 marks for Flexible Assessment Method.

**Textbooks**

**M.Tech COMPUTER SCIENCE AND ENGINEERING**

Choice Based Credit System (CBCS)

SEMESTER – I

**Internet of Things Laboratory (0:0:2) 1**

(Effective from the academic year 2022-23)

Course Code	22MCSL17	CIE Marks	50
Teaching Hours/Week (L: T:P)	0:0:2	SEE Marks	50
Total Number of Contact Hours	26	Exam Hours	3

**Course Objectives:**

This course will enable students to:

1. To provide skills for designing and analyzing IOT Concepts.
2. To enable students to work on various IOT sensor.
3. To provide skills to work towards solution of real-life problems

**List of Experiments-PART A**

1. Transmit a string using UART.
2. Point-to-Point communication of two Motes over the radio frequency.
3. Multi-point to single point communication of Motes over the radio frequency. LAN (Subnetting).
4. I2C protocol study: Reading Temperature and Relative Humidity value from the sensor.

**PART-B:Mini Project**

- For any problem selected in domain of IOT.
- Make sure that the application should use at least 3 or more sensor.
- Indicative areas like health care can be included.

**Course Outcomes:** The students will be able to:

CO1: Demonstrate how communication happens between two objects within a LAN .

CO2: Examine how an IoT solution can be used to control an object through Internet.

CO3: Develop programming solutions for given problem scenario.

**M.TECH COMPUTER SCIENCE AND ENGINEERING**

Choice Based Credit System (CBCS)

SEMESTER – I

**MOOCs (0:0:0:2) 2**

(Effective from the academic year 2022-23)

Course Code	22MCS18	CIE Marks	-
Teaching Hours/Week (L: T:P: SS)	0:0:0:2	SEE Marks	-
Total Number of Contact Hours	26	Exam Hours	-

**Preamble:**

Students can choose any course related to the domain / program which is for 2 credits (26 hours to 30 hours and 12-14 weeks course). The course can be from NPTEL, Coursera, Udemy or any other leading platform with examination and assessments. The web link for few courses listed in the various platforms is given below

- [Computer Science and Engineering \(nptel.ac.in\)](https://nptel.ac.in/noc/courses/106/) - <https://nptel.ac.in/noc/courses/106/>
- Top Online Courses and Specializations | Coursera - <https://www.coursera.org/courses>

**Course Outcome:** The students will be able to:

**C01:** Acquire the knowledge beyond the curriculum

**C02:** Facilitate practical learning by leading practitioners around the world in the field of study.

**C03:** Exposure to various assessment methods for all round application of the chosen topic

**C04:** Earn industry badges /certification in the leading topics in the filed of study.

# **SEMESTER – II**

<b>M.TECH COMPUTER SCIENCE AND ENGINEERING</b>			
Choice Based Credit System (CBCS)			
SEMESTER – II			
<b>Machine Learning -2 (3:0:2) 4</b>			
(Effective from the academic year 2022-23)			
Course Code	22MCS21	CIE Marks	50
Teaching Hours/Week (L: T:P)	3:0:2	SEE Marks	50
Total Number of Contact Hours	40+26	Exam Hours	3
<b>Course Objectives:</b>			
This course will enable students to:			
<ol style="list-style-type: none"> <li>1. Discuss the concepts of statistical learning</li> <li>2. summarize Linear regression and Classification techniques and outline Tree based methods</li> <li>3. Explain unsupervised learning with statistical learning.</li> <li>4. Learning about a set of tools for modelling and understanding complex datasets.</li> </ol>			
<b>Module – 1</b>			
<b>Preamble:</b> Significance and Scope of the course, Importance of the course in societal, political and economic growth of the nation, Impact of the course on societal and ethical issues and career perspective.			
Significance and Scope of the course: Data Science helps with creating insights from data that deals with real world complexities and Machine Learning helps in accurately predicting or classifying outcomes for new data points by learning patterns from historical data. Data scientists can work with machine learning with equal ease. Data science allows data collected for other purposes to be applied to model problems related to various domains. The most popular programming languages among data scientists are open source tools that include or support pre-built statistical and machine learning capabilities. Machine learning is expanding across all fields such as banking and finance, information technology, media entertainment, gaming etc.			
<b>Statistical Learning:</b> What Is Statistical Learning, Assessing Model Accuracy, Assessing Model Accuracy			
(10 Hours)			
<b>Module – 2</b>			
<b>Linear Regression:</b> Simple Linear Regression, Multiple Linear Regression, Other Considerations in the Regression Model: Potential Problems, Comparison of Linear Regression with <i>K</i> -Nearest			
(10 Hours)			
<b>Module – 3</b>			
<b>Classification:</b> An Overview of Classification, Why Not Linear Regression? Logistic Regression, Linear Discriminant Analysis			
<b>Tree-Based Methods:</b> The Basics of Decision Trees. Bagging, Random Forests, Boosting			
(10 Hours)			
<b>Module – 4</b>			
<b>Unsupervised Learning:</b> The Challenge of Unsupervised Learning, Principal Components Analysis, Clustering Methods			
(10 Hours)			
<b>Module – 5</b>			

**Support Vector Machines:** Maximal marginal classifier, Support Vector Classifier.  
**Resampling Methods: Cross Validation-** The validation set approach, Leave one out cross validation, K fold cross validation. The Bootstrap.

**Self-Study Topics:**

- Reinforcement learning
- Convolutional Neural Network.
- Deep Learning algorithms

**Recap/ Summary of the Course**

(10 Hours)

**Course Outcomes:** The students will be able to:

- C01: Discuss the concepts of statistical learning
- C02: Illustrate Supervised learning methods
- C03: Interpret various Unsupervised learning methods
- C04: Analyze statistical learning methods for various areas.

**Question paper pattern:**

- **SEE** will be conducted for 100 marks.
- Each full question is for 20 marks. (Answer five full questions out of 10 questions with intra modular choice). In every question, there will be a maximum of three sub-questions.
- **CIE** will be announced prior to the commencement of the course.
- 25 marks for test. Average of three tests will be taken.
- 25 marks for Flexible Assessment Method.

**Textbooks:**

1. Gareth James, Daniela Witten, Trevor Hastie and Robert Tibshirani. "Introduction to Statistical Learning (with Applications in R)", Springer, 2017.

**References:**

1. Simon Rogers, Mark Girolami, A First Course in Machine Learning (Chapman & Hall/Crc Machine Learning & Pattern Recognition), CRC Press, 2011.

## Machine Learning Lab

Write the R programming for the following Questions.

Q1.

- a) Load Auto. Data file.
- b) View the data in a spread sheet using fix () function.
- c) Handle the missing element of the data matrix.
- d) Check for dimension and Variable names.

Q2.

- a) Plot the scatterplots of the quantitative scatterplot variables.
- b) Produce a numerical summary of each variable in Auto. Data file.

Q3.

- a) Fit a Simple Linear Regression model using least square.
- b) Produce confidence intervals and prediction intervals.
- c) Analyse detailed information using summary function.

Q4.

- a) Fit a multiple linear regression model using least squares.
- b) Analyse detailed information using summary function.
- c) Include interaction terms in a linear model using the lm() function.
- d) Analyse detailed information using summary function.

Q5.

- a) Fit a logistic regression model. Use the functions to access coefficients and particular aspects of the fitted model.
- b) Compute the confusion matrix in order to determine how many observations were correctly or incorrectly classified.
- c) Fit a linear discriminant analysis model.

Q6.

- a) knn() function to predict the market's movement, for K=1
- b) Compare the result with K=3.
- c) Fit a QDA model to the Smarket data.

Q7.

- a) Fit a classification tree in order to predict target variable
- b) Lists the variables that are used as internal nodes in the tree, the number of terminal nodes, and the (training) error rate.
- c) Plot the tree Structure, display the node labels.
- d) Evaluate its performance on the test data.
- e) Find the number of terminal nodes of each tree considered (size) as well as the corresponding error rate and the value of the cost-complexity parameter used.

Q8.

- a) Perform PCA on the USArrests data set.
- b) Plot the first two principal components.
- c) Output the standard deviation of each principal component.
- d) Compute the proportion of variance explained by each principal component.
- e) Plot the PVE explained by each component and cumulative PVE,

Q9

- a) Performs K-means clustering.
- b) Plot the data, with each observation coloured according to its cluster assignment.

- c) Implements hierarchical clustering.
- d) Compute the  $50 \times 50$  inter-observation Euclidean distance matrix.
- e) Plot the dendrograms.

Q10.

- a) Use the `svm()` function to fit the support vector classifier for given value of the cost parameter.
- b) Analyze basic information about the support vector classifier fit using the summary function.
- c) Compare SVMs with a linear kernel, using a range of values of the cost parameter.
- d) Access the cross-validation errors for each of these models using the summary function.
- e) Generate the test data and predict the class labels of the test observations.

<b>M.TECH COMPUTER SCIENCE AND ENGINEERING</b> Choice Based Credit System (CBCS) SEMESTER – II			
<b>Advanced DBMS and Big Data (2:2:0) 3</b> (Effective from the academic year 2022-23)			
Course Code	22MCS23	CIE Marks	50
Teaching Hours/Week (L: T:P)	2:2:0	SEE Marks	50
Total Number of Contact Hours	40	Exam Hours	3
<b>Course Objectives:</b> This course will enable students to:			
<ol style="list-style-type: none"> <li>1. Develop map-reduce analytics using Hadoop and related tools</li> <li>2. Define big data for business intelligence</li> <li>3. Analyse business case studies for big data analytics</li> <li>4. Explain managing of Big data without SQL</li> </ol>			
<b>Module – 1</b>			
<p><b>Preamble:</b> Significance and Scope of the course, Importance of the course in societal, political and economic growth of the nation, Impact of the course on societal and ethical issues and career perspective.</p> <p>The industry is a data driven with billion worth of business data with high impact on Engineering, Economics and Statistics. Most scientific, research and e commerce industries are highly data drive and oriented for economic success.</p> <p><b>UNDERSTANDING BIG DATA:</b> What is big data – why big data –. Data!, Data Storage and Analysis, Comparison with Other Systems, Rational Database Management System , Grid Computing, Volunteer Computing, convergence of key trends – unstructured data – industry examples of big data – web analytics – big data and marketing – fraud and big data – risk and big data – credit risk management – big data and algorithmic trading – big data and healthcare – big data in medicine – advertising and big data – big data technologies.</p> <p style="text-align: right;">(8 Hours)</p>			
<b>Module – 2</b>			
<p><b>NOSQL DATA MANAGEMENT:</b> Introduction to NoSQL – aggregate data models – aggregates – key-value and document data models –relationships–graph databases– schema less databases – materialized views – distribution models – shading -- version – map reduce – partitioning and combining – composing map-reduce calculations..</p> <p style="text-align: right;">(8 Hours)</p>			
<b>Module – 3</b>			
<p><b>BASICS OF HADOOP:</b> Data format – analysing data with Hadoop – scaling out – Hadoop streaming – Hadoop pipes – design of Hadoop distributed file system(HDFS) – HDFS concepts – Java interface – data flow – Hadoop I/O – data integrity – compression – serialization – Avro – file-based data structures.</p> <p style="text-align: right;">(8 Hours)</p>			
<b>Module – 4</b>			
<p><b>MAPREDUCE APPLICATIONS:</b> MapReduce workflows – unit tests with MRUnit – test data and local tests – anatomy of MapReduce job run – classic Map-reduce – YARN – failures in classic Map-reduce and YARN – job scheduling – shuffle and sort – task execution – MapReduce types – input formats – output formats</p> <p style="text-align: right;">(8 hours)</p>			
<b>Module – 5</b>			

**HADOOP RELATED TOOLS:** Hbase – data model and implementations – Hbase clients – Hbase examples – praxis. Cassandra – Cassandra data model – Cassandra examples – Cassandra clients – Hadoop integration. Pig – Grunt – pig data model – Pig Latin – developing and testing Pig Latin scripts. Hive – data types and file formats – HiveQL data definition – HiveQL data manipulation – HiveQL queries.

**Recap/ Summary of the Course**

(8 hours)

**Course Outcomes:** The students will be able to:

CO1: Summarize the fundamentals and concepts of Big Data.

CO2: Apply non-relational databases (NoSQL) techniques for storing and processing large volumes of structured and unstructured data.

CO3: Analyse methods and algorithms, to compare them to solve problems.

CO4: Evaluate efficient big data solutions for various application using novel platform architectures of Hadoop and Map-Reduce.

**Question paper pattern:**

- **SEE** will be conducted for 100 marks.
- Each full question is for 20 marks. (Answer five full questions out of 10 questions with intra modular choice). In every question, there will be a maximum of three sub-questions.
- **CIE** will be announced prior to the commencement of the course.
- 25 marks for test. Average of three tests will be taken.
- 25 marks for Flexible Assessment Method.

<b>M.TECH COMPUTER SCIENCE AND ENGINEERING</b> Choice Based Credit System (CBCS) SEMESTER – II			
<b>Probability, Statistics and Queuing theory (2:2:0) 3</b> (Effective from the academic year 2022 -2023)			
Course Code	22MCS23A1	CIE Marks	50
Teaching Hours/Week (L:T:P)	2:2:0	SEE Marks	50
Total Number of Contact Hours	40	Exam Hours	3
<p><b>Course Objectives:</b> This course will enable students to:</p> <ol style="list-style-type: none"> <li>1. Develop analytical capability and to impart knowledge of Probability, Statistics and Queuing.</li> <li>2. Apply above concepts in Engineering and Technology.</li> <li>3. Acquire knowledge of Hypothesis testing and Queuing methods and their applications so as to enable them to apply them for solving real world problems</li> </ol>			
<b>Module – 1</b>			
<p><b>Introduction:</b> Significance and Scope of the course, Importance of the course in societal, political and economic growth of the nation, Impact of the course on societal and ethical issues and career perspective</p> <p><b>Introduction:</b> Axioms of probability, Conditional probability, Total probability, Baye’s theorem, Discrete Random variable, Probability mass function, Continuous Random variable. Probability density function, Cumulative Distribution Function, and its properties, Two-dimensional Random variables, Joint pdf / cdf and their properties.</p> <p style="text-align: right;">(8 Hours)</p>			
<b>Module – 2</b>			
<p><b>Probability Distributions / Discrete distributions:</b> Binomial, Poisson Geometric and Hyper-geometric distributions and their properties. Continuous distributions: Uniform, Normal, exponential distributions and their properties.</p> <p style="text-align: right;">(8 Hours)</p>			
<b>Module – 3</b>			
<p><b>Random Processes:</b> Classification, Methods of description, Special classes, Average values of Random Processes, Analytical representation of Random Process, Autocorrelation Function, Cross-correlation function and their properties, Ergodicity, Poisson process, Markov Process, Markov chain.</p> <p style="text-align: right;">(8 Hours)</p>			
<b>Module – 4</b>			
<p><b>Testing Hypothesis:</b> Testing of Hypothesis: Formulation of Null hypothesis, critical region, level of significance, errors in testing, Tests of significance for Large and Small Samples, t-distribution, its properties and uses, F-distribution, its properties and uses, Chi-square distribution, its properties and uses, <math>\chi^2</math> – test for goodness of fit, <math>\chi^2</math> test for Independence.</p> <p style="text-align: right;">(8 Hours)</p>			
<b>Module – 5</b>			
<p><b>Symbolic Representation:</b> Symbolic Representation of a Queuing Model, Poisson Queue system, Little Law, Types of Stochastic Processes, Birth-Death Process, The M/M/1 Queuing System, The M/M/s Queuing System, The M/M/s Queuing with Finite buffers.</p> <p><b>Recap/</b> Summary of the course.</p> <p style="text-align: right;">(8 Hours)</p>			

**Course Outcomes:** The students should be able to:

- CO1: Demonstrate use of probability and characterize probability models using probability mass (density) functions & cumulative distribution functions.
- CO2: Illustrate the discrete & continuous probability distributions techniques and its and its applications.
- CO3: Interpret mean and correlation functions for a given random process.
- CO4: Use methods of Hypothesis testing for goodness of fit.
- CO5: Apply queuing theory techniques for the given problems.
- CO6: Utilize a random process in terms of its mean and correlation functions.

**Question paper pattern:**

- **SEE** will be conducted for 100 marks.
- Each full question is for 20 marks. (Answer five full questions out of 10 questions with intra modular choice). In every question, there will be a maximum of three sub-questions.
- **CIE** will be announced prior to the commencement of the course.
- 25 marks for test. Average of three tests will be taken.
- 25 marks for Flexible Assessment Method.

**Textbook:**

1. Probability, Statistics and Queuing Theory, V. Sundarapandian, Eastern Economy Edition, PHI Learning Pvt. Ltd, 2009.

**References:**

1. Probability & Statistics with Reliability, Queuing and Computer Applications, 2nd Edition by Kishor. S. Trivedi, Prentice Hall of India ,2004.
2. Probability, Statistics and Random Processes, 1st Edition by P Kausalya, Pearson Education, 2013.

<b>M.TECH COMPUTER SCIENCE AND ENGINEERING</b>			
Choice Based Credit System (CBCS)			
SEMESTER – II			
<b>Advanced Cryptography (2:2:0) 4</b>			
(Effective from the academic year 2022 -23)			
Course Code	22MCS23A2	CIE Marks	50
Teaching Hours/Week (L: T:P)	2:2:0	SEE Marks	50
Total Number of Contact Hours	40	Exam Hours	3
<b>Course Objectives:</b>			
This course will enable students to:			
<ol style="list-style-type: none"> <li>1. Explain standard algorithms used to provide confidentiality, integrity and authenticity.</li> <li>2. Distinguish key distribution and management schemes.</li> <li>3. Deploy encryption techniques to secure data in transit across data networks</li> <li>4. Implement security applications in the field of Information technology.</li> </ol>			
<b>Module – 1</b>			
<b>Introduction:</b> Significance and Scope of the course, Importance of the course in societal, political, and economic growth of the nation. Impact of the course on societal and ethical issues and career perspective.			
<b>Overview of Cryptography:</b> Introduction, Information security and cryptography, Basic terminology and concepts, Symmetric key encryption, Digital signatures, Public-key cryptography, Hash functions, Protocols and mechanisms, Key establishment, management, and certification, Pseudorandom numbers and sequences, Classes of attacks and security models.			
(8 Hours)			
<b>Module – 2</b>			
<b>Symmetric &amp; Asymmetric Cryptography:</b> Classical encryption techniques, Block cipher design principles and modes of operation, Data encryption standard, Evaluation criteria for AES, AES cipher, Principles of public key cryptosystems, The RSA algorithm, Key management – Diffie Hellman Key exchange, Elliptic curve arithmetic-Elliptic curve cryptography.			
(8 Hours)			
<b>Module – 3</b>			
<b>Mathematical Background:</b> Probability theory, Information theory, Complexity theory, Number theory, Abstract algebra, Finite fields, The integer factorization problem, The RSA problem, The Diffie-Hellman problem, Composite moduli.			
<b>Number Theory:</b> Introduction to number theory, Overview of modular arithmetic, discrete logarithms, and primality/factoring, Euclid’s algorithm, Finite fields, Prime numbers, Fermat’s and Euler’s theorem- Testing for primality, A quick introduction to groups, rings, integral domain and fields.			
(8 Hours)			
<b>Module – 4</b>			
<b>Geometric Extensions:</b> Fields, Characteristic of a field, prime fields, Arithmetic of polynomials over fields. Field extensions, Galois group of a field extensions, Fixed field and Galois extensions. Minimum polynomial, Construction of fields with the help of an irreducible polynomial. Splitting field of a polynomial, Separable polynomial and Separable extensions. Construction of finite fields and their structure. Enumeration of irreducible polynomials over finite fields. Fundamental theorem of Galois Theory. Cyclotomic extensions, Geometric constructions and Galois theory of Equations (Statement only of Abel			

Ruffini), Solving Cubic and Bi-quadratic polynomials using radicals.

(8 Hours)

### Module – 5

**Quantum Cryptography and Quantum Teleportation:** Heisenberg uncertainty principle, polarization states of photons, quantum cryptography using polarized photons, local vs. nonlocal interactions, entanglements, EPR paradox, Bell’s theorem, Bell basis, teleportation of a single qubit theory and experiments.

**Recap/Summary** of the course.

(8 Hours)

**Course Outcomes:** The students will be able to:

- C01: Apply the OSI security architecture and classical encryption techniques for simple applications.
- C02: Compare various cryptographic techniques.
- C03: Analyze the vulnerabilities in any computing system and hence be able to design a cryptographic solution.
- C04: Evaluate security mechanisms using rigorous approaches, including theoretical.

**Question paper pattern:**

- **SEE** will be conducted for 100 marks.
- Each full question is for 20 marks. (Answer five full questions out of 10 questions with intra modular choice). In every question, there will be a maximum of three sub-questions.
- **CIE** will be announced prior to the commencement of the course.
- 25 marks for test. Average of three tests will be taken.
- 25 marks for Flexible Assessment Method.

**Textbooks:**

1. Alfred J. Menezes, Paul C. van Oorschot and Scott A. Vanstone, “Handbook of Applied Cryptography” CRC Press.
2. Neal Koblitz, A Course in Number Theory and Cryptology, Springer 1987.
3. William Stallings, Cryptography and Network Security Principles And Practice, 6th edition, 2019.

<b>M.TECH COMPUTER SCIENCE AND ENGINEERING</b>			
Choice Based Credit System (CBCS)			
SEMESTER – II			
<b>Wireless Adhoc Networks (2:2:0) 3</b>			
(Effective from the academic year 2022 -23)			
Course Code	22MCS23A3	CIE Marks	50
Teaching Hours/Week (L: T:P)	2:2:0	SEE Marks	50
Total Number of Contact Hours	40	Exam Hours	3
<b>Course Objectives:</b>			
This course will enable students to:			
<ol style="list-style-type: none"> <li>1. Comprehend the fundamental principles of Ad-hoc Networks</li> <li>2. Discuss a comprehensive understanding of Ad-hoc network protocols</li> <li>3. Outline current and emerging trends in Ad-hoc Wireless Networks.</li> <li>4. Analyze energy management in ad-hoc wireless networks.</li> </ol>			
<b>Module – 1</b>			
<b>Introduction:</b> Significance and Scope of the course, Importance of the course in societal, political, and economic growth of the nation. Impact of the course on societal and ethical issues and career perspective.			
<b>Ad-hoc Wireless Networks Introduction:</b> Issues in Ad-hoc Wireless Networks, Ad-hoc Wireless Internet; MAC Protocols for Ad-hoc Wireless Networks: Introduction, Issues in Designing a MAC Protocol, Design Goals of MAC Protocols, Classification of MAC protocols, Contention-Based Protocols, Contention-Based Protocols with Reservation Mechanisms, Contention-Based Protocols with Scheduling Mechanisms, MAC Protocols that Use Directional Antennas.			
(8 Hours)			
<b>Module – 2</b>			
<b>Routing Protocols:</b> Introduction, Issues in Designing a Routing Protocol for Ad-hoc Wireless Networks; Classification of Routing Protocols; Table Driven Routing Protocols; On-Demand Routing Protocols, Hybrid Routing Protocols, Hierarchical Routing Protocols and Power-Aware Routing Protocols			
(8 Hours)			
<b>Module – 3</b>			
<b>Multicast Routing:</b> Introduction, Issues in Designing a Multicast Routing Protocol, Operation of Multicast Routing Protocols, An Architecture Reference Model for Multicast Routing Protocols, Classifications of Multicast Routing Protocols, Tree-Based Multicast Routing Protocols and Mesh-Based Multicast Routing Protocols.			
(8 Hours)			
<b>Module – 4</b>			
<b>Transport Layer and Security Protocols for Ad-hoc Networks:</b> Introduction, Issues in Designing a Transport Layer Protocol; Design Goals of a Transport Layer Protocol; Classification of Transport Layer Solutions; TCP over Transport Layer Solutions; Other Transport Layer Protocols for Ad-hoc Networks; Security in Ad-hoc Wireless Networks, Issues and Challenges in Security Provisioning, Network Security Attacks, Key Management and Secure Routing Ad-hoc Wireless Networks.			
(8 Hours)			
<b>Module – 5</b>			
<b>Quality of Service and Energy Management:</b> Introduction, Issues and Challenges in Providing QoS in Ad-hoc Wireless Networks, Classification of QoS Solutions, MAC Layer Solutions, Network Layer Solutions; Energy Management in Ad-hoc Wireless Networks: Introduction, Need for Energy Management in Ad-hoc Wireless Networks, Classification of			

Energy Management Schemes, Battery Management Schemes, Transmission Management Schemes, System Power Management Schemes.

**Recap/Summary** of the course.

(8 Hours)

**Course Outcomes:** The students will be able to:

- CO1: Apply the OSI architecture for simple applications of adhoc networks.
- CO2: Compare various routing protocols.
- CO3: Analyze energy consumption and management.
- CO4: Evaluate the existing network and improve its quality of service.

**Question paper pattern:**

- **SEE** will be conducted for 100 marks.
- Each full question is for 20 marks. (Answer five full questions out of 10 questions with intra modular choice). In every question, there will be a maximum of three sub-questions.
- **CIE** will be announced prior to the commencement of the course.
- 25 marks for test. Average of three tests will be taken.
- 25 marks for Flexible Assessment Method.

**Textbook:**

**M. TECH COMPUTER SCIENCE AND ENGINEERING**

Choice Based Credit System (CBCS)

SEMESTER – II

**Cloud Computing (2:2:0) 3**

(Effective from the academic year 2022-23)

Course Code	22MCS23A4	CIE Marks	50
Teaching Hours/Week (L:T:P)	2:2:0	SEE Marks	50
Total Number of Contact Hours	40	Exam Hours	3

**Course Objectives:** This course will enable students to,

- The student will learn how to apply trust-based security model to real-world security problems.
- An overview of the concepts, processes, and best practices needed to successfully secure information within Cloud infrastructures.
- Students will learn the basic Cloud types and delivery models.
- Develop an understanding of the risk and compliance responsibilities and Challenges for each Cloud type and service delivery model.
- Security Issues in Cloud Computing Infrastructure Security.

**Module – 1**

**Introduction:** Significance and Scope of the course, Importance of the course in societal, political and economic growth of the nation, Impact of the course on societal and ethical issues and career perspective

**Introduction to cloud computing :** Introduction to Cloud Computing Online Social Networks and Applications, Cloud introduction and overview, Different clouds, Risks, Novel applications of cloud computing. Characteristics of Cloud Computing, Benefits and advantages of Cloud Computing. Cloud computing platforms: Infrastructure as service: Amazon EC2, Platform as Service: Google App Engine, Microsoft Azure, Utility Computing, Elastic Computing.

(8 Hours)

**Module – 2**

Cloud Computing Architecture Requirements, Introduction Cloud computing architecture, On Demand Computing Virtualization at the infrastructure level, Security in Cloud computing environments, CPU Virtualization, A discussion on Hypervisors Storage Virtualization Cloud Computing Defined, The SPI Framework for Cloud Computing, The Traditional Software Model, The Cloud Services Delivery Model Cloud Deployment Models Key Drivers to Adopting the Cloud, The Impact of Cloud Computing on Users, Governance in the Cloud, Barriers to Cloud Computing Adoption in the Enterprise.

(8 Hours)

**Module – 3**

Security Issues in Cloud Computing Infrastructure Security, Infrastructure Security: The Network Level, The Host Level, The Application Level, Data Security and Storage, Aspects of Data Security, Data Security Mitigation Provider Data and Its Security Identity and Access Management Trust Boundaries and IAM, IAM Challenges, Relevant IAM Standards and Protocols for Cloud Services, IAM Practices in the Cloud, Cloud Authorization Management .

(8 Hours)

**Module – 4**

Security Management in the Cloud Security Management Standards, Security Management in the Cloud, Availability Management: SaaS, PaaS, IaaS Privacy Issues Privacy Issues, Data Life Cycle, Key Privacy Concerns in the Cloud, Protecting Privacy, Changes to Privacy Risk Management and Compliance in Relation to Cloud Computing, Legal and Regulatory Implications, U.S. Laws and Regulations, International Laws and Regulations

(8 Hours)

### Module - 5

Audit and Compliance Internal Policy Compliance, Governance, Risk, and Compliance (GRC), Regulatory/External Compliance, Cloud Security Alliance, Auditing the Cloud for Compliance, Security-as-a-Cloud. ADVANCED TOPICS Recent developments in hybrid cloud and cloud security. Service Oriented Architecture: Basic concepts of message-based transactions, Protocol stack for an SOA architecture, Event-driven SOA, Enterprise Service Bus, Service catalogs; Applications in the Cloud: Concepts of cloud transactions, functionality mapping, Application attributes, Cloud service attributes, System abstraction and Cloud Bursting

**Recap/Summary:** of the course.

(8 Hours)

**Course Outcomes:** The student will be able to,

CO1: Identify security aspects of each cloud model

CO2: Apply trust-based security model to different layer

CO3: Develop a risk-management strategy for moving to the Cloud.

CO4: Implement a public cloud instance using a public cloud service provider.

#### Question paper pattern:

- **SEE** will be conducted for 100 marks.
- Each full question is for 20 marks. (Answer five full questions out of 10 questions with intra modular choice). In every question, there will be a maximum of three sub-questions.
- **CIE** will be announced prior to the commencement of the course.
- 25 marks for test. Average of three tests will be taken.
- 25 marks for Flexible Assessment Method.

#### Textbooks:

1. Cloud Computing Explained: Implementation Handbook for Enterprises, John Rhoton, Publication Date: November 2, 2009.
2. Cloud Security and Privacy: An Enterprise Perspective on Risks and Compliance (Theory in Practice), Tim Mather, ISBN-10: 0596802765, O'Reilly Media, September 2009.

<b>M.Tech Computer Science and Engineering</b> Choice Based Credit System (CBCS) Semester – II			
<b>Automation Testing (2:2:0) 3</b> (Effective from the academic year 2022-23)			
Course Code	22MCS24B1	CIE Marks	50
Teaching Hours/Week (L:T:P)	2:2:0	SEE Marks	50
Total Number of Lecture Hours	40	Exam Hours	3
<b>Course objectives:</b>			
This course will enable students to:			
1. Understand the fundamental criteria for test cases.			
2. Learn about the test management and test automation techniques.			
3. Apply test metrics and measurements in the real-world scenario.			
4. Design of test cases.			
<b>Module – 1</b>			
<b>Preamble:</b> Significance and Scope of the course, Importance of the course in societal, political and economic growth of the nation, Impact of the course on societal and ethical issues and career perspective.			
Automation Testing is presently an important technology worldwide. Government, academia, and industry are involved in different aspects of research, implementation, and business with <b>Automation Testing</b> . The <b>Automation Testing</b> is a course about the new paradigm of software testing, with software testing tool, and with other objects. Important to learn the fundamentals of this emerging technology.			
<b>The Value of Test Automation:</b> Why Do We Need Test Automation? From Waterfall to Agile Software Development The Cost of Software Complexity Refactoring Continuous Improvement From Manual to Automated Testing: First Attempt: Record and Playback Getting the Most Out of Test Automation Differences Between Manual and Automated Tests			
<b>People and Tools:</b> Choosing the Right Tools Who Should Write the Tests? The Variety of Tools (8 Hours)			
<b>Module – 2</b>			
<b>Reaching Full Coverage :</b> How Do You Measure Coverage?Gaining Value Before Reaching Full CoverageWhat Do We Do When We Have Full Coverage?How Do We Get to 100% Coverage?Reversing the Wheel My Road Map to Successful Automation Project			
<b>Business Processes:</b> Running the Tests on a Regular BasisHandling Bugs That Are Found by the Automation Continuous Integration Acceptance Test Driven Development (ATDD)Continuous Delivery and Continuous Deployment (8 Hours)			
<b>Module – 3</b>			
<b>Preparing for the Tutorial:</b> Prerequisites and Presumptions Applicability of the Process or Existing Test Automation Systems Overview of the Process Getting to Know the SUT Preparing the Environment for the Tutorial Using Git Through Visual Studio			
<b>Test Automation and Architecture:</b> Test Architecture Considerations Understanding the SUT Architecture Alternatives and Considerations in a Layered Architecture Real-World Architecture			
<b>Isolation and Test Environments:</b> Isolation Problems and Solutions Isolation Techniques			
<b>The Big Picture:</b> The Relationships Between Software Architecture and Business Structure The Relationships Between Software Architecture and Organizational Structure with Test Automation (8 Hours)			

## Module – 4

**Designing the First Test Case :** Choosing the First Test to Automate The Scientific Method for Designing a Test Case

**Start Coding the First Test:** Creating the Project Write the Pseudo-code Getting the Code to Compile Model Code Review

**Completing the First Test:** Running the Test to Find What to Implement First Adding Selenium to the Project Implementing the MVCForumClient Constructor Implementing RegisterNewUserAndLogin Hitting the Isolation Problem Implementing CreateDiscussion and Analyzing the Failure Completing the Test

**Investigating Failures:** Integrating with Latest Version of MVCForum Improving the Error Reporting Logging and Other Evidence Collection Adding Nested Visual Logger to MVCForum Tests Investigating Challenging Failures

(8 Hours)

## Module – 5

**Adding More Tests:** Writing the Next Tests Making Additional Improvements Supporting Multiple Users and Browsers Additional Improvement Opportunities Adding More Tests

**Continuous Integration:** Is It Really Necessary? Creating the Test Build Process Changing the Development Processes and Culture Decreasing the Test Run Duration Covering a Broader Matrix

**Acceptance Test Driven Development:** Overview on ATDD Being More Agile The Process Using the Acceptance Tests as Documentation Introducing ATDD in an Existing Project

**Recap:** Summary of the Course

(8 Hours)

**Course Outcomes:** The students will be able to

C01: Understand the concepts of software testing.

C02: Illustrate basic framework used in automation testing .

C03: Identify functionality and usage of various tools in automation testing .

C04: Analyze applications of automation testing in real time scenario.

C05: Design a use case in automation testing using Selenium .

**Question paper pattern:**

- **SEE** will be conducted for 100 marks.
- Each full question is for 20 marks. (Answer five full questions out of 10 questions with intra modular choice). In every question, there will be a maximum of three sub-questions.
- **CIE** will be announced prior to the commencement of the course.
- 25 marks for test. Average of three tests will be taken.
- 25 marks for Flexible Assessment Method.

**Textbooks:**

<b>M.TECH COMPUTER SCIENCE AND ENGINEERING</b>			
Choice Based Credit System (CBCS)			
SEMESTER – II			
<b>Block Chain Technology (2:2:0) 3</b>			
(Effective from the academic year 2022-23)			
Course Code	22MCS24B2	CIE Marks	50
Teaching Hours/Week (L: T:P)	2:2:0	SEE Marks	50
Total Number of Contact Hours	40	Exam Hours	3
<b>Course Objectives:</b>			
This course will enable students to:			
<ol style="list-style-type: none"> <li>1. Explain Intrusion Detection, Policy Creation, Social Engineering, DDoS Attacks, Buffer Overflows and Virus Creation.</li> <li>2. Compare different types of hacking tools</li> <li>3. Design system into block chain systems.</li> <li>4. Test blocks chain system for any vulnerability.</li> </ol>			
<b>Module – 1</b>			
<b>Introduction:</b> Significance and Scope of the course, Importance of the course in societal, political and economic growth of the nation, Impact of the course on societal and ethical issues and career perspective.			
<b>Basics:</b> Distributed Database, Two General Problem, Byzantine General problem and Fault Tolerance, Hadoop Distributed File System, Distributed Hash Table, ASIC resistance, Turing Complete. Cryptography: Hash function, Digital Signature - ECDSA, Memory Hard Algorithm, Zero Knowledge Proof.			
(8 Hours)			
<b>Module – 2</b>			
<b>Blockchain:</b> Introduction, Advantage over conventional distributed database, Blockchain Network, Mining Mechanism, Distributed Consensus, Merkle Patricia Tree, Gas Limit, Transactions and Fee, Anonymity, Reward, Chain Policy, Life of Blockchain application, Soft & Hard Fork, Private and Public blockchain.			
(8 Hours)			
<b>Module – 3</b>			
<b>Distributed Consensus:</b> Nakamoto consensus, Proof of Work, Proof of Stake, Proof of Burn, Difficulty Level, Sybil Attack, Energy utilization and alternate. Models for BLOCKCHAIN - GARAY model - RLA Model - Proof of Work ( PoW) as random oracle - formal treatment of consistency, liveness and fairness - Proof of Stake ( PoS) based Chains - Hybrid models			
(8 Hours)			
<b>Module – 4</b>			
<b>Wireless Hacking:</b> Wireless Foot printing, Wireless Scanning and Enumeration, Gaining Access, Tools that exploiting WEP Weakness, Denial of Services Attacks, Firewalls: Firewalls landscape, Firewall Identification-Scanning Through firewalls, packet Filtering, Application Proxy Vulnerabilities, Denial of Service Attacks, Motivation of Dos Attackers, Types of DoS attacks, Generic Dos Attacks, UNIX and Windows DoS			
(8 Hours)			

## Module – 5

**Block chain Applications:** Internet of Things, Medical Record Management System, Domain Name Service and future of Block chain.

Summary: Overview of various techniques under hacking and application of blockchain.

(8 Hours)

**Course Outcomes:** The students will be able to:

- CO1: Identify major research challenges and technical gaps existing between theory and practice in blockchain.
- CO2: Differences between proof-of-work and proof-of-stake consensus.
- CO3: Demonstrate how intruders escalate privileges.
- CO4: Design, build, and deploy a distributed application.

### Question paper pattern:

- **SEE** will be conducted for 100 marks.
- Each full question is for 20 marks. (Answer five full questions out of 10 questions with intra modular choice). In every question, there will be a maximum of three sub-questions.
- **CIE** will be announced prior to the commencement of the course.
- 25 marks for test. Average of three tests will be taken.
- 25 marks for Flexible Assessment Method.

<b>M.TECH COMPUTER SCIENCE AND ENGINEERING</b>			
Choice Based Credit System (CBCS)			
SEMESTER – II			
<b>Computer Vision (2:2:0) 3</b>			
(Effective from the academic year 2022-23)			
Course Code	22MCS24B3	CIE Marks	50
Teaching Hours/Week (L:T:P)	2:2:0	SEE Marks	50
Total Number of Contact Hours	40	Exam Hours	3
<b>Course Objectives:</b>			
This course will enable students to:			
<ol style="list-style-type: none"> <li>1. To review image processing techniques for computer vision.</li> <li>2. To understand shape and region analysis.</li> <li>3. To understand three-dimensional image analysis techniques.</li> <li>4. To understand motion analysis.</li> <li>5. To study some applications of computer vision algorithms.</li> </ol>			
<b>Module - 1</b>			
<b>Introduction and Fundamentals:</b> Significance and Scope of the course, Importance of the course in societal, political and economic growth of the nation, Impact of the course on societal and ethical issues and career perspective			
<b>Introduction:</b> Origins of Digital Image Processing, examples, Fundamental Steps in Digital Image Processing, Components of an Image Processing System, Digital Image Fundamentals: A Simple Image Formation Model, Basic Concepts in Sampling and Quantization, Representing Digital Images, Basic relationship between pixels, Zooming and Shrinking. Image Processing Prototyping Tool: Overview, Image processing toolbox, working environment and editor, Reading, loading and displaying images, Saving Image and simple image manipulations.			
(8 Hours)			
<b>Module - 2</b>			
<b>Image Enhancement :</b> Image Enhancement in the Spatial Domain: Some Basic Gray Level Transformations, Histogram Processing, Enhancement Using Arithmetic/Logic Operations, Basics of Spatial Filtering, Smoothing Spatial Filters, Sharpening Spatial Filters, Combining Spatial Enhancement Methods. Image Enhancement in the Frequency Domain: Background, Image Enhancement in the Frequency Domain, Introduction to the Fourier Transform and the Frequency, Domain, Smoothing Frequency-Domain Filters, Sharpening Frequency Domain Filters, Homomorphic Filtering.			
(8 Hours)			
<b>Module - 3</b>			
<b>Image Segmentation:</b> Detection of Discontinuities, line and spot detection, Edge detection, gradient operators, compass operators, Laplace operator, stochastic gradients,			
<b>Edge Linking and Boundary Detection:</b> Thresholding- local and adaptive, Region-Based Segmentation, Region Growing and Linking, Splitting and Merging.			
<b>Hough Transform:</b> Principle, Line detection and Linking, Peak Detection, Circle detection.			
(8 Hours)			
<b>Module - 4</b>			
<b>Shapes And Regions:</b> N-Ary shape analysis – connectedness – object labelling and counting – size filtering – distance functions – skeletons and thinning – deformable shape analysis – boundary tracking procedures – active contours – shape models and shape			

recognition – centroidal profiles – handling occlusion – boundary length measures – boundary descriptors – chain codes – Fourier descriptors – region descriptors – moments.  
(8 hours)

### Module - 5

**3D Vision And Motion :** Methods for 3D vision – projection schemes – shape from shading – photometric stereo – shape from texture – shape from focus – active range finding – surface representations – point-based representation – volumetric representations – 3D object recognition – 3D reconstruction – introduction to motion – triangulation – bundle adjustment – translational alignment – parametric motion – spline-based motion – optical flow – layered motion.

**Recap/Summary:** Application of various image processing Techniques

(8 hours)

**Course Outcomes:** The students will be able to:

CO1: Explain the fundamentals of image processing

CO2: Apply 3D vision techniques.

CO3: Write programs on motion related techniques.

CO4: Develop applications using computer vision techniques.

#### Question paper pattern:

- **SEE** will be conducted for 100 marks.
- Each full question is for 20 marks. (Answer five full questions out of 10 questions with intra modular choice). In every question, there will be a maximum of three sub-questions.
- **CIE** will be announced prior to the commencement of the course.
- 25 marks for test. Average of three tests will be taken.
- 25 marks for Flexible Assessment Method.

## M.TECH COMPUTER SCIENCE AND ENGINEERING

Choice Based Credit System (CBCS)

SEMESTER – II

### Mobile Applications Development (2:2:0) 3

(Effective from the academic year 2022-23)

Course Code	22MCS24B4	CIE Marks	50
Teaching Hours/Week (L:T:P)	2:2:0	SEE Marks	50
Total Number of Contact Hours	40	Exam Hours	3

#### Course Objectives:

This course will enable students to:

1. To understand the working of the android and windows life cycle of the application.
2. To write a simple and complex program for android and windows OS.
3. To present different Google Map API.
4. To establish adequate research interest in topics Device driver and developing the emulator
5. Implement the design using specific mobile development frameworks

#### Module – 1

**Introduction:** Significance and Scope of the course, Importance of the course in societal, political and economic growth of the nation, Impact of the course on societal and ethical issues and career perspective.

**An Overview of Android:** Introducing Android, The Open Handset Alliance, Android Platform differences, Android Platform. Configuring Your Development environment, Exploring Android software development Kit, Writing first android application.

**Understand the Anatomy of an android application:** The life Cycle of android application, manifest file, defining android application using the manifest file, Creating First android application, Type of Android application.

(8 Hours)

#### Module – 2

**Managing Application Resources:** Resources, Working with resources. Referencing the system resources, Managing multiple Application Configuration, Configurations.

**Exploring User Interface Screen Elements:** Introducing Android view ,Widgets and Layouts, Displaying Text to user, Getting the text from the user, Using Buttons, checkbox and Radio groups, Getting Dates and times user, Indicating the information to the user.

(8 Hours)

#### Module – 3

**Working in the Background:** Introducing Services, Creating and Controlling Services, Using background thread, introducing loaders, Manual thread creation and thread synchronization.

**Using Android Data and Storage API:** Working with application Preferences, Working with files and Directories, Storing the Structured data using SQLite Databases, Implementing query(),insert(),update() and getType (), Updating the Manifest file, Working with Live Folder.maps

(8 Hours)

#### Module – 4

**Smartphone Application Development:** Developing Your First Smartphone Application, UI Design with Forms and Controls , Smartphone UI Design, Keyboard Input and Input Mode.  
**Data Access with SQL Server Mobile :** Microsoft SQL Server 2005 Mobile Edition, Writing SQL Server Mobile Applications, Setting Up the SQL Server Mobile Server Environment .  
(8 Hours)

### Module – 5

**Introduction to Objective C – iOS** features – UI implementation – Touch frameworks – Data persistence using Core Data and SQLite – Location aware applications using Core Location and Map Kit – Integrating calendar and address book with social media application – Using Wifi - iPhone marketplace.  
**Recap /** Summary of the course  
(8 Hours)

**Course Outcomes:** The students will be able to:

- CO1: Apply the fundamentals of mobile architecture, lifecycle of android, resources ,maps, graphics, hardware sensors ,wireless devices
- CO2: Analyse the application based on the maps, OpenGL, hardware sensors, Communication API's
- CO3: Design the windows application framework using the available Windows system level API's
- CO4: Implement the design using Objective C and iOS

#### Question paper pattern:

- **SEE** will be conducted for 100 marks.
- Each full question is for 20 marks. (Answer five full questions out of 10 questions with intra modular choice). In every question, there will be a maximum of three sub-questions.
- **CIE** will be announced prior to the commencement of the course.
- 25 marks for test. Average of three tests will be taken.
- 25 marks for Flexible Assessment Method.

#### Textbooks:

1. Reto Meier, Professional Android 4 Application Development, Wrox Publication,2012,
2. Baijian Yang, Pei Zheng, Lionel M. Ni, Professional Microsoft Smartphone Programming, Wrox Publication,2007.
3. James Dovey and Ash Furrow, “Beginning Objective C”, Apress, 2012
4. David Mark, Jack Nutting, Jeff LaMarche and Frederic Olsson, “Beginning iOS 6 Development: Exploring the iOS SDK”, Apress, 2013.

#### References:

1. Shane Conder, Lauren Darcey, Android Wireless Application Development,3rd Edition, Addison Wesley,2009.
2. Zigurd Mednieks, Laird Dornin, G. Blake Meike, Masumi Nakamura, Programming Android,2nd Edition ,O'Reilly Publication ,2012.
3. Satya Komatineni , Dave MacLean , Sayed Hashimi, Pro Android 3, Apress publication ,2011.

## M.TECH COMPUTER SCIENCE AND ENGINEERING

Choice Based Credit System (CBCS)

SEMESTER – II

### Big Data Laboratory (0:2:2) 2

(Effective from the academic year 2022-23)

Course Code	22MCSL25	CIE Marks	50
Teaching Hours/Week (L: T:P)	0:2:2	SEE Marks	50
Total Number of Contact Hours	26+26	Exam Hours	3

#### Course Objectives:

This course enables students to:

1. Optimize business decisions and create competitive advantage with Big Data analytics
2. Imparting the architectural concepts of Hadoop and introducing map reduce Paradigm
3. Introducing Java concepts required for developing map reduce programs
4. Introduce programming tools PIG & HIVE in Hadoop ecosystem.
5. Developing Big Data applications for streaming data using Apache Spark

#### List of Experiments

##### Experiment 1

Start by reviewing HDFS. It found that the composition of HDFS is like your local Linux file system. Use the ***hadoop fs*** command while interacting with HDFS.

1. Review the commands available for the Hadoop Distributed File System:
2. Copy file foo.txt from local disk to the user's directory in HDFS
3. Get a directory listing of the user's home directory in HDFS
4. Get a directory listing of the HDFS root directory
5. Display the contents of the HDFS file user/fred/bar.txt
6. Move that file to the local disk, named as baz.txt
7. Create a directory called input under the user's home directory
8. Delete the directory input old and all its contents.
9. Verify the copy by listing the directory contents in HDFS:

##### Experiment 2

Using the HDFS, learn the control of map/reduce jobs.

1. Create a JOB and submit to cluster
2. Track the job information
3. Terminate the job
4. Counters in MR Jobs with example
5. Map only Jobs and generic map examples
6. Distributed cache example
7. Combiners, Secondary sorting and Job chain examples

##### Experiment 3

Write a Map Reduce program that mines weather data. Weather sensors collecting data every hour at many locations across the globe gather a large volume of log data, which is a good candidate for analysis with MapReduce, since it is semi structured and record oriented.

##### Experiment 4

Using the Movie Lens data at the URL <http://grouplens.org/datasets/movielens/> develop map/reduce program to perform basic operations on the data set.

1. List all the movies and the number of ratings
2. List all the users and the number of ratings they have done for a movie
3. List all the Movie IDs which have been rated (Movie Id with at least one user rating it)

4. List all the Users who have rated the movies (Users who have rated at least one movie)
5. List of all the User with the max, min, average ratings they have given against any movie
6. List all the Movies with the max, min, average ratings given by any user

### **Experiment 5**

Use HiveQL to filter and aggregate “click data” to build facts about user’s movie preferences. The query results should be saved in a staging table and must be used to populate the database.

1. Write a query to select only those clicks which correspond to starting, browsing, completing, or purchasing movies. Use a CASE statement to transform the RECOMMENDED column into integers where ‘Y’ is 1 and ‘N’ is 0. Also, ensure GENREID is not null. Only include the first 25 rows.
2. Write a query to select the customer ID, movie ID, recommended state and most recent rating for each movie.
3. Load the results of the previous two queries into a staging table.
4. Load the results of the queries into the staging table.

### **Experiment 6**

Learn basic Pig Latin semantics and the fundamental types in Pig Latin, Data Bags and Tuples.

1. Start the Grunt shell and execute the following statements to set up a dataflow with the click stream data.
2. Group the log sample by movie and dump the resulting bag.
3. Add a GROUP BY statement to the sessionize.pig script to process the click stream data into user sessions.

**Course Outcomes:** The students will be able to:

- C01: Preparing for data summarization, query, and analysis.
- C02: Applying data modelling techniques to large data sets
- C03: Creating applications for Big Data analytics
- C04: Building a complete business data analytic solution

## M.TECH COMPUTER SCIENCE AND ENGINEERING

Choice Based Credit System (CBCS)

SEMESTER – II

### Mini Project with Seminar (0:0:0:4) 2

(Effective from the academic year 2022-23)

Course Code	22MCS26	CIE Marks	50
Teaching Hours/Week (L: T:P:PW)	0:0:0:4	SEE Marks	-
Total Number of Contact Hours	48	Exam Hours	-

**Preamble:** Mini Project for PG students gives an opportunity to build upon learning gained in the earlier years, and to broaden the scope of understanding. Students are required to take complete ownership of their project, and this necessitates a considerable time and effort beyond the exercise of knowledge and skills. They must be self-regulating and self-directed in their time management. It is expected that the students use the wide range of knowledge and skills that they have gathered over the course of their post graduate program.

M.Tech Students are motivated to focus on projects related to the following area (Specialization):

- Computer Network Security.
- Artificial Intelligence
- Data Science

### Synopsis Phase (Review 1)

All project proposals (Synopsis) submitted must be approved by the Project Evaluation Committee (PEC). The role of PEC is to verify, approve and evaluate the projects submitted by students.

### Project Evaluation Committee (PEC)

The projects are evaluated by Project Evaluation Committee (PEC). The committee consists of HOD, guide and senior faculty members as shown in table below-

Name	Role
Head of Department, Dept. of CSE	Chairman
Senior Faculty-1	Member
Senior Faculty -2	Member
Senior Faculty -3	Member
Guide	Member

### Mini Project + Seminar (Review 2)

All students shall submit detailed presentation and report with chosen topic in 3rd semester. The presentation shall cover the design methodology, requirement analysis covering detailed functional and non-functional requirements. The design shall cover both high level and low-level design aspects of the system. The presentation shall be with PEC committee identified for the students in the previous semester. This shall be considered for 50% of the CIE marks allocated for the Mini project.

Students shall also present a paper in international conference relevant to the area of the project work for the literature work carried out in the last semester along with proposed method.

All students shall submit the detailed presentation with demonstration of the project

work. The student shall prepare to submit his/her experimental results in peer review high impact indexed journals or submit a patent application on the work carried out. A draft mini project report will be submitted to PEC members prior to the presentation date. This review will be for 50% of the marks allocated to CIE. Corrections shall be suggested by guide, PEC member, PG Coordinator and HoD. After all corrections are made the student shall prepare to submit the final report copy.

**Course Outcome:** The students will be able to:

**C01:** Identify the requirements for the real-life problems.

**C02:** Conduct a survey of several available literatures in the preferred field of study.

**C03:** Develop project successfully by coding, emulating and testing.

**C04:** Prepare quality report and present the findings of the project conducted in the preferred domain.

# **SEMESTER – III**

<b>M.Tech. COMPUTER SCIENCE AND ENGINEERING</b>			
Choice Based Credit System (CBCS)			
SEMESTER – III			
<b>Cyber Security and Forensics (3:2:0) 4</b>			
(Effective from the academic year 2022-23)			
Course Code	22MCS31	CIE Marks	50
Teaching Hours/Week (L:T:P)	3:2:0	SEE Marks	50
Total Number of Contact Hours	40	Exam Hours	3
<b>Course Objectives:</b>			
This course will enable students to:			
<ol style="list-style-type: none"> <li>1. To summarize the concepts of cyber forensics and its applications in different context.</li> <li>2. To investigate incident and areas affected due to cybercrime.</li> <li>3. To illustrate tools used in cyber forensic</li> <li>4. To infer legal perspectives in cyber security</li> <li>5. To apply the policies, security standards, and IPR issues on a cybercrime incident.</li> </ol>			
<b>Module – 1</b>			
<b>Preamble:</b> Significance and Scope of the course, Importance of the course in societal, political and economic growth of the nation, Impact of the course on societal and ethical issues and career perspective.			
The course aims to provide an overview of cyber law, security, tools, and approaches to secure resources and manage intellectual property for enhancing the competitiveness for organizations. Upon completion of this course, students should be able to accomplish the course outcomes defined. The cyber security and forensics have direct impact on the security systems, society, financial models and affecting the GDP.			
<b>Introduction to Cybercrime:</b> Cybercrime: Definition and Origins of the Word, Cybercrime and Information Security, Who are Cybercriminals?, Classifications of Cybercrimes, Cybercrime: The Legal Perspectives, Cybercrimes: An Indian Perspective, Cybercrime and the Indian ITA 2000, A Global Perspective on Cybercrimes, Cybercrime Era: Survival Mantra for the Netizens. Cyber offenses: How Criminals Plan Them: How Criminals Plan the Attacks, Social Engineering, Cyberstalking, Cybercafe and Cybercrimes, Botnets: The Fuel for Cybercrime, Attack Vector.			
(8 Hours)			
<b>Module – 2</b>			
<b>Cybercrime:</b> Mobile and Wireless Devices: Introduction, Proliferation of Mobile and Wireless Devices, Trends in Mobility, Credit Card Frauds in Mobile and Wireless Computing Era, Security Challenges Posed by Mobile Devices, Registry Settings for Mobile Devices, Authentication Service Security, Attacks on Mobile/Cell Phones, Mobile Devices: Security Implications for organizations, Organizational Measures for Handling Mobile, Organizational Security Policies and Measures in Mobile Computing Era, Laptops.			
(8 Hours)			
<b>Module – 3</b>			
<b>Tools and Methods Used in Cybercrime:</b> Introduction, Proxy Servers and Anonymizers, Phishing, Password Cracking, Keyloggers and Spywares, Virus and Worms, Trojan Horses and Backdoors, Steganography, DoS and DDoS Attacks, SQL Injection, Buffer Overflow, Attacks on Wireless Networks. Phishing and Identity Theft: Introduction, Phishing, Identity Theft (ID Theft).			
(8 Hours)			
<b>Module – 4</b>			
<b>Understanding Computer Forensics:</b> Introduction, Historical Background of Cyberforensics, Digital Forensics Science, The Need for Computer Forensics, Cyber forensics			

and Digital Evidence, Forensics Analysis of E-Mail, Digital Forensics Life Cycle, Chain of Custody Concept, Network Forensics, Approaching a Computer Forensics Investigation, Setting up a Computer Forensics Laboratory: Understanding the Requirements, Computer Forensics and Steganography, Relevance of the OSI 7 Layer Model to Computer Forensics, Forensics and Social Networking Sites: The Security/Privacy Threats, Computer Forensics from Compliance Perspective, Challenges in Computer Forensics, Special Tools and Techniques, Forensics Auditing, Antiforensics.

(8 Hours)

### Module – 5

**Introduction to Security Policies and Cyber Laws:** Need for An Information Security Policy, Information Security Standards – Iso, Introducing Various Security Policies and Their Review Process, Introduction to Indian Cyber Law, Objective and Scope of the it Act, 2000, Intellectual Property Issues, Overview of 20082020 / 23 Intellectual - Property - Related Legislation in India, Patent, Copyright, Law Related to Semiconductor Layout and Design, Software License.

**Recap:** This course highlights the significance of cyber security, the need for mitigating the cybercrimes, tools used, role of forensics, IT Act and IPR issues, policy and standards. The course facilitates the learning at higher cognitive levels to gain deeper understanding of the subject.

(8 Hours)

#### Course Outcomes:

The students will be able to:

- CO1: Identify the proliferations of cybercrime in various computing systems orchestrated by cyber criminals/attackers.
- CO2: Analyze the influence cyber-forensics in investigating the given cybercrime.
- CO3: Infer legal issues and socio-economic impact due to cybercrime.
- CO4: Examine relevant network defense / web application tool to solve given cyber security problem.

#### Question paper pattern:

- SEE will be conducted for 100 marks.
- Each full question is for 20 marks. (Answer five full questions out of 10 questions with intra modular choice). In every question, there will be a maximum of three sub-questions.
- CIE will be announced prior to the commencement of the course.
- 25 marks for test. Average of three tests will be taken.
- 25 marks for Flexible Assessment Method.

#### Textbooks:

1. Sunit Belapure, Nina Godbole, Cyber Security: Understanding Cyber Crimes, Computer Forensics and Legal Perspectives Wiley India Pvt Ltd 2013
2. Surya Prakash Tripathi, Ritendra Goyal, Praveen Kumar Shukla, Introduction to information security and cyber laws, Dreamtech Press 2015

#### References:

2. James Graham, Ryan Olson, Rick Howard , Cyber Security Essentials CRC Press 2010

<b>M.Tech. COMPUTER SCIENCE AND ENGINEERING</b>			
Choice Based Credit System (CBCS)			
SEMESTER – III			
<b>Game Programming (3:0:0) 3</b>			
(Effective from the academic year 2022-23)			
Course Code	22MCS32C1	CIE Marks	50
Teaching Hours/Week (L:T:P)	3:0:0	SEE Marks	50
Total Number of Contact Hours	40	Exam Hours	3
<b>Course Objectives:</b>			
This course will enable students to:			
<ol style="list-style-type: none"> <li>1. Understand the concepts of Game design and development.</li> <li>2. Learn the processes, mechanics and issues in Game Design.</li> <li>3. Be exposed to the Core architectures of Game Programming.</li> <li>4. Know about Game programming platforms, frame works and engines.</li> <li>5. Learn to develop games.</li> </ol>			
<b>Module – 1</b>			
<b>Preamble:</b> Significance and Scope of the course, Importance of the course in societal, political and economic growth of the nation, Impact of the course on societal and ethical issues and career perspective.			
HTML5 and modern JavaScript game engines have helped revolutionized web based games. Though the world of HTML game development continues to grow and evolve, An Introduction to HTML5 Game Development with Phaser.js, provides a grounded resource and vital learning tool to anyone looking to optimize web game development process.			
<b>Introduction:</b> State of HTML5 Games, A Simple Game.			
(8 Hours)			
<b>Module – 2</b>			
Workspace Setup, Phaser Project Setup			
(8 Hours)			
<b>Module – 3</b>			
<b>Phaser Principles:</b> Game Loop, States, Display List, The World, Camera, Loading and the Asset Cache, Images, Sprites, Texture Atlases, Tile Sprites, Input, Sound			
(8 Hours)			
<b>Module – 4</b>			
<b>Phaser Principles contd:</b> Maps, Tweens, Physics Primer, Phases of a Physics System, Bodies, Arcade Physics			
(8 Hours)			
<b>Module – 5</b>			
<b>Game Examples:</b> Shoot 'em Up, Game Prefabs			
<b>Recap:</b> This course enables new and upcoming features of JavaScript and another execution environment of Node and NPM, which are robust tools that just about any modern web developer will have on their computer. The course facilitates the learning at higher cognitive levels to gain deeper understanding of the subject.			
(8 Hours)			

**Course Outcomes:**

The students will be able to:

- C01: Apply the concepts of Game design and development.
- C02: Analyze the Core architectures of Game Programming.
- C03: Infer processes and use mechanics for game development.
- C04: Examine Game programming platforms, frame works and engines.

**Question paper pattern:**

- **SEE** will be conducted for 100 marks.
- Each full question is for 20 marks. (Answer five full questions out of 10 questions with intra modular choice). In every question, there will be a maximum of three sub-questions.
- **CIE** will be announced prior to the commencement of the course.
- 25 marks for test. Average of three tests will be taken.
- 25 marks for Flexible Assessment Method.

**Textbook:**

<b>M.Tech COMPUTER SCIENCE AND ENGINEERING</b>			
Choice Based Credit System (CBCS)			
SEMESTER – III			
<b>Cryptocurrencies (3:0:0) 3</b>			
(Effective from the academic year 2022-23)			
Course Code	22MCS32C2	CIE Marks	50
Teaching Hours/Week (L:T:P)	3:0:0	SEE Marks	50
Total Number of Contact Hours	40	Exam Hours	3
<b>Course Objectives:</b>			
This course will enable students to:			
<ol style="list-style-type: none"> <li>1. Apply features of Block chain to the given crypto currency.</li> <li>2. Demonstrates the working of block chain application involving cryptocurrencies.</li> <li>3. Compare various protocols and consensus algorithms for a given application.</li> <li>4. Select appropriate regulation framework for legal use of cryptocurrencies.</li> </ol>			
<b>Module – 1</b>			
<b>Preamble:</b> Significance and Scope of the course, Importance of the course in societal, political and economic growth of the nation, Impact of the course on societal and ethical issues and career perspective.			
Block chain technology has the potential to revolutionize interactions between governments, businesses and citizens. Blockchain and Cryptocurrency are vastly discussed in all research domains to bring the decentralization. The bit coin has revolutionised the working financial models and has global impact on financial transactions leading to boost GDP over next decade.			
<b>Introduction:</b> Distributed Database, Two General Problem, Byzantine General problem and Fault Tolerance, Hadoop Distributed File System, Distributed Hash Table, ASIC resistance, Turing Complete. Cryptography: Hash function, Digital Signature - ECDSA, Memory Hard Algorithm, Zero Knowledge Proof.			
(8 Hours)			
<b>Module – 2</b>			
<b>Blockchain:</b> Introduction, Advantage over conventional distributed database, Blockchain Network, Mining Mechanism, Distributed Consensus, Merkle Patricia Tree, Gas Limit, Transactions and Fee, Anonymity, Reward, Chain Policy, Life of Blockchain application, Soft & Hard Fork, Private and Public blockchain.			
<b>Block chain Use cases:</b> Blockchain in trade/supply chain: Provenance of goods, visibility, trade/supply chain finance, invoice management/discounting, Internet of Things, Government, Health, Finance, Media, Alternative to Blockchain.			
(8 Hours)			
<b>Module – 3</b>			
<b>Requirements for the consensus protocols-</b> Proof of Work (PoW)-Scalability aspects of Blockchain consensus protocols: Permissioned Blockchains-Design goals-Consensus protocols for Permissioned Blockchains.			
<b>Smart Contracts and Ethereum 101:</b> Smart Contracts: Definition, Ricardian contracts. Ethereum 101: Introduction, Ethereum blockchain, Elements of the Ethereum blockchain, Precompiled contracts.			
(8 Hours)			
<b>Module – 4</b>			
<b>BitCoin:</b> Introduction to Bitcoin, key concepts of Bitcoin, Merits and De Merits Fork and Segwits, Sending and Receiving bitcoins, choosing bitcoin wallet, Converting Bitcoins to Fiat Currency.			

(8 Hours)

### Module – 5

**Cryptocurrency:** History, Distributed Ledger, Bitcoin protocols - Mining strategy and rewards, Ethereum - Construction, DAO, Smart Contract, GHOST, Vulnerability, Attacks, Sidechain, Namecoin,

**Cryptocurrency Regulation:** Stakeholders, Roots of Bitcoin, Legal Aspects – Cryptocurrency Exchange, Black Market and Global Economy.

**Recap:** Concepts related to block chain and consensus algorithm, bit coin, crypto currency regulation

(8 Hours)

**Course Outcomes:** The students will be able to:

C01: Demonstrate the basics of the Block Chain concepts using modern tools and technologies.

C02: Identify major research challenges and technical gaps existing between theory and practice in crypto currency domain.

C03: Apply consensus algorithm platform to implement the Block chain Application.

C04: Analyse the security and efficiency of a given cryptocurrencies. .

#### Question paper pattern:

- **SEE** will be conducted for 100 marks.
- Each full question is for 20 marks. (Answer five full questions out of 10 questions with intra modular choice). In every question, there will be a maximum of three sub-questions.
- **CIE** will be announced prior to the commencement of the course.
- 25 marks for test. Average of three tests will be taken.
- 25 marks for Flexible Assessment Method.

<b>M.TECH. COMPUTER SCIENCE AND ENGINEERING</b> Choice Based Credit System (CBCS) SEMESTER – III			
<b>Augment and Virtual Reality (3:0:0) 3</b> (Effective from the academic year 2022-23)			
Course Code	22MCS32C3	CIE Marks	50
Teaching Hours/Week (L: T:P)	3:0:0	SEE Marks	50
Total Number of Contact Hours	40	Exam Hours	3
<b>Course Objectives:</b> This course will enable students to:			
<ol style="list-style-type: none"> <li>1. Understand the basics of virtual reality</li> <li>2. Understand geometric modeling and Virtual environment.</li> <li>3. Study about Virtual Hardware and Software</li> <li>4. Develop Virtual Reality applications</li> </ol>			
<b>Module – 1</b>			
<p><b>Introduction:</b> Significance and Scope of the course, Importance of the course in societal, political and economic growth of the nation, Impact of the course on societal and ethical issues and career perspective.</p> <p>AR/VR is created a national importance with as many 180 start ups in the last year which are working on domains like entertainment, manufacturing and healthcare.</p> <p><b>Introduction to VR:</b> Definition of VR, modern experiences, historical perspective. Hardware, sensors, displays, software, virtual world generator, game engines, human senses, perceptual psychology, psychophysics. Geometric modeling, transforming rigid bodies, yaw, pitch, roll, axis-angle representation, quaternions, 3D rotation inverses and conversions, homogeneous transforms, transforms to displays.</p> <p style="text-align: right;">(8 Hours)</p>			
<b>Module – 2</b>			
<p><b>Virtual environment:</b> Light propagation, lenses and images, diopters, spherical aberrations, optical distortion; more lens aberrations; spectral properties; the eye as an optical system; cameras; visual displays. Parts of the human eye, photoreceptors and densities, scotopic and photopic vision, display resolution rudiments, eye movements, neural vision structures, sufficient display resolution, other implications of physiology on VR.</p> <p>Depth perception, motion perception, vection, stroboscopic apparent motion, color perception, combining information from multiple cues and senses, implications of perception on VR.</p> <p style="text-align: right;">(8 Hours)</p>			
<b>Module – 3</b>			

**Geometric modeling**

Depth perception, motion perception, vection, stroboscopic apparent motion, color perception, combining information from multiple cues and senses, implications of perception on VR.

Graphical rendering, ray tracing, shading, BRDFs, rasterization, barycentric coordinates, VR rendering problems, anti-aliasing, distortion shading, image warping (time warp), panoramic rendering.

Velocities, acceleration, vestibular system.

(8 Hours)

**Module - 4****Introduction to Augmented Reality:**

Tracking systems, estimating rotation, IMU integration, drift errors, tilt and yaw correction, estimating position, camera-feature detection model, perspective n-point problem, sensor fusion, lighthouse approach, attached bodies, eye tracking, inverse kinematics, map building, SLAM.

(10 Hours)

**Module - 5**

Sound propagation, ear physiology, auditory perception, auditory localization; Fourier analysis; acoustic modeling, HRTFs, rendering, auralization.

Perceptual training, recommendations for developers, best practices, VR sickness, experimental methods that involve human subjects.

Touch, haptics, taste, smell, robotic interfaces, telepresence, brain-machine interfaces.

**Summary:** Various perception models with spatial and visual characteristics modeled under architectural purview.

(8 Hours)

**Course Outcomes:** The students will be able to:

CO1: Explain fundamentals of virtual reality systems

CO2: Summarize the hardware and software of the VR

CO3: Analyze the applications of VR

**Question paper pattern:**

- **SEE** will be conducted for 100 marks.
- Each full question is for 20 marks. (Answer five full questions out of 10 questions with intra modular choice). In every question, there will be a maximum of three sub-questions.
- **CIE** will be announced prior to the commencement of the course.
- 25 marks for test. Average of three tests will be taken.
- 25 marks for Flexible Assessment Method.

**Textbooks:**

1. Steven M. LaValle, "VIRTUAL REALITY", <http://vr.cs.uiuc.edu/book.html> , Cambridge University Press, 2016

**References:**

<b>M.TECH COMPUTER SCIENCE AND ENGINEERING</b> Choice Based Credit System (CBCS) SEMESTER – III			
<b>Software Defined Networks (3:0:0) 3</b> (Effective from the academic year 2022-23)			
Course Code	22MCS32C4	CIE Marks	50
Teaching Hours/Week (L:T:P)	3:0:0	SEE Marks	50
Total Number of Lecture Hours	40	Exam Hours	3
<b>Course Objectives:</b> This course will enable students to: 1. Understand the basic knowledge of software defined networks. 2. Learn about the basics of Open flow protocols. 3. Apply the concept of software defined network in the advance trends.			
<b>Module – 1</b>			
<b>Introduction:</b> Significance and Scope of the course, Importance of the course in societal, political and economic growth of the nation, Impact of the course on societal and ethical issues and career perspective.  Implication and Scope of Software defined networking in connecting device and how it is changing the way communications networks are managed, maintained, and secured. Impact of the course on current Innovations and Research trends.  <b>Basic Packet-Switching Terminology-</b> The Modern Data Center- Traditional Switch Architecture- Autonomous and Dynamic Forwarding Tables- Evolution of Switches and Control Planes- Cost- SDN Implications for Research and Innovation- Data Center Innovation.  <span style="float: right;">(8 Hours)</span>			
<b>Module – 2</b>			
<b>The Evolution of Networking Technology-</b> Forerunners of SDN - Software Defined Networking OpenFlow- Sustaining SDN Interoperability- Network Virtualization- Fundamental Characteristics of SDN- SDN Operation- SDN Devices- SDN Controller- SDN Applications- Alternate SDN Methods.  <span style="float: right;">(8 Hours)</span>			
<b>Module – 3</b>			
<b>OpenFlow Overview-</b> OpenFlow 1.0 and OpenFlow Basics-OpenFlow 1.1 Additions- OpenFlow 1.2 Additions- OpenFlow 1.3 Additions- OpenFlow Limitations- Potential Drawbacks of Open SDN- SDN via APIs- DN via Hypervisor-Based Overlays- SDN via Opening Up the Device- Network Functions Virtualization- Alternatives Overlap and Ranking. <b>SDN in the Data Center-</b> Data Center Demands- Tunneling Technologies for the Data Center- Path Technologies in the Data Center- Ethernet Fabrics in the Data Center, SDN Use Cases in the Data Center.  <span style="float: right;">(8 Hours)</span>			
<b>Module – 4</b>			
<b>Open SDN versus Overlays in the Data Center-</b> Real-World Data Center- SDN in Other Environments- Wide Area Networks- Service Provider and Carrier Networks- Campus Networks- Hospitality Networks- Mobile Networks- Optical Networks  <span style="float: right;">(8 Hours)</span>			
<b>Module – 5</b>			
<b>Software Defined Networking For Internet-Of-Things:</b> Why SDN for the IoT? –SDN Simplicity for the IoT-SDN architecture for IoT - SDN—Scalability for the IoT-SDN Traffic Flow Optimization for the IoT-Security and Connectivity- The Telco Role Amazon Web			

Services for IoT.

**Recap:** Summary of the Course

(8 Hours)

**Course Outcomes:** The students will be able to:

C01: Summarize the simple switching architecture and components.

C02: Illustrate basic framework used in open flow switch .

C03: Identify functionality and usage of various protocols in open flow architecture.

C04: Analyse applications of SDN in data centre.

C05: Infer architecture of SDN that will be used in IOT.

**Question paper pattern:**

- **SEE** will be conducted for 100 marks.
- Each full question is for 20 marks. (Answer five full questions out of 10 questions with intra modular choice). In every question, there will be a maximum of three sub-questions.
- **CIE** will be announced prior to the commencement of the course.
- 25 marks for test. Average of three tests will be taken.
- 25 marks for Flexible Assessment Method.

**Textbooks:**

<b>M.TECH COMPUTER SCIENCE AND ENGINEERING</b>			
Choice Based Credit System (CBCS)			
SEMESTER – III			
<b>Object Oriented Modelling and Design (3:0:0) 3</b>			
(Effective from the academic year 2022-23)			
Course Code	22MCS33D1	CIE Marks	50
Teaching Hours/Week (L:T:P)	3:0:0	SEE Marks	50
Total Number of Contact Hours	40	Exam Hours	3
<b>Course Objectives:</b>			
This course will enable students to:			
<ol style="list-style-type: none"> <li>1. Understand what software life cycle is, how software projects are planned and managed, types of resources involved in software development projects, risks are identified and assessed, predictions and assessments are made.</li> <li>2. Identify software engineering problems, including the specification, design, implementation, and testing of software systems that meet specification, performance, maintenance and quality requirements.</li> <li>3. Analyse and specify software requirements through a productive working relationship with various stakeholders of the project.</li> </ol>			
<b>Module – 1</b>			
<b>Introduction:</b> Significance and Scope of the course, Importance of the course in societal, political and economic growth of the nation, Impact of the course on societal and ethical issues and career perspective.			
Implication and Scope of Object Oriented Modelling and Design in specification, design, implementation, and testing of software systems that meet specification, performance, maintenance and quality requirements. Impact of the course on current Innovations and Research trends.			
<b>Introduction to Software Engineering:</b> Software, Software Crisis, Software Engineering definition, Evolution of Software Engineering Methodologies, Software Engineering Challenges. Software Processes: Software Process, Process Classification, Phased development life cycle, Software Development Process Models, Process, use, applicability and Advantages/limitations.			
(8 Hours)			
<b>Module – 2</b>			
<b>Object oriented Paradigm:</b> Object oriented Concepts, Classes, Objects, Attributes, Methods and services, Messages, Encapsulation, Inheritance, Polymorphism, Identifying the elements of object model, management of object oriented Software projects, Object Oriented Analysis, Domain Analysis, Generic Components of OOA model, OOA Process, Object Relationship model, Object Behavior Model.			
(8 Hours)			
<b>Module – 3</b>			
<b>Object Oriented Design:</b> Design for Object- Oriented systems, The Generic components of the OO design model, The System design process, The Object design process, Design Patterns, Object Oriented Programming.			
(8 Hours)			
<b>Module – 4</b>			
<b>Object Oriented testing:</b> Broadening the view of Testing, Testing of OOA and OOD models, Object-Oriented testing strategies, Test case design for OO software, testing methods applicable at the class level, Interclass test case design.			
(8 Hours)			

## Module - 5

**Technical Metrics for Object Oriented Systems:** The Intent of Object-Oriented metrics, The distinguishing Characteristics, Metrics for the OO Design model, Class-Oriented metrics, Operation-Oriented Metrics, Metrics for Object Oriented testing, Metrics for Object Oriented projects. CASE Tools

**Recap:** Summary of the Course

(8 Hours)

**Course Outcomes:** The students will be able to:

CO1: Summarize the Model the object-oriented software systems using Unified Modelling Language (UML).

CO2: Identify cost of constructing object-oriented software.

CO3: Apply the Object-Oriented Software-Development Process to design software.

CO4: Analyse and Specify software requirements through a SRS documents.

CO5: Design and Plan software solutions to problems using an object-oriented strategy.

**Question paper pattern:**

- **SEE** will be conducted for 100 marks.
- Each full question is for 20 marks. (Answer five full questions out of 10 questions with intra modular choice). In every question, there will be a maximum of three sub-questions.
- **CIE** will be announced prior to the commencement of the course.
- 25 marks for test. Average of three tests will be taken.
- 25 marks for Flexible Assessment Method.

**Textbooks:**

1. Stephen R. Schach, Object oriented and Classical Software Engineering, 7/e, Tata McGraw Hill Edition.
2. Timothy Lethbridge, Robert Laganier, Object oriented and Classical Software Engineering, Tata McGraw Hill Edition.
3. Roger S Pressman, Software Engineering, Tata McGraw Hill Edition.

<b>M.Tech. COMPUTER SCIENCE AND ENGINEERING</b>			
Choice Based Credit System (CBCS)			
SEMESTER – III			
<b>Robotic Process Automation(3:0:0) 3</b>			
(Effective from the academic year 2022-23)			
Course Code	22MCS33D2	CIE Marks	50
Teaching Hours/Week (L:T:P)	3:0:0	SEE Marks	50
Total Number of Contact Hours	40	Exam Hours	3
<b>Course Objectives:</b>			
This course will enable students to:			
1. Gain a clear understanding of RPA and benefits, understanding the limits and constraints of automation.			
2. Understand the basic AA components, features and technology.			
3. Acquire the knowledge on purpose and use of the control center.			
4. Understand the various use cases and write bots.			
<b>Module – 1</b>			
<b>Preamble:</b> Significance and Scope of the course, Importance of the course in societal, political and economic growth of the nation, Impact of the course on societal and ethical issues and career perspective.			
Robotic process automation (RPA) is a form of business process automation technology based on metaphorical software robots or on artificial intelligence /digital workers. It is sometimes referred to as software robotics. RPA involves the use of software that mimics human actions while interacting with applications in a computer and accomplishing rule-based tasks. This often requires reading from and typing or clicking on existing applications that are used to perform the given tasks.			
<b>RPA Foundations:</b> What is RPA, Flavors of RPA, History of RPA, The Benefits of RPA-The downsides of RPA, RPA Compared to BPO, BPM and BPA, Consumer Willingness for Automation, The Workforce of the Future. <b>RPA Skills:</b> On-Premise Vs. the Cloud, Web Technology, Programming Languages and Low Code, OCR, Databases, APIs, AI, Cognitive Automation, Agile, Scrum, Kanban and Waterfall, DevOps, Flowcharts. (8 Hours)			
<b>Module – 2</b>			
<b>Components of RPA</b> , RPA Platforms, About UiPath, The future of automation. <b>Record and Play:</b> UiPath stack, Downloading and installing UiPath Studio, Learning UiPath Studio, Task recorder, Step-by-step examples using the recorder. (8 Hours)			
<b>Module – 3</b>			
<b>Sequence, Flowchart, and Control Flow:</b> Sequencing the workflow, Activities, Control flow, various types of loops, and decision making, Step-by-step example using Sequence and Flowchart, Step-by-step example using Sequence and Control flow. <b>Data Manipulation:</b> Variables and scope, Collections, Arguments – Purpose and use, Data table usage with examples, Clipboard management, File operation with step-by-step example, CSV/Excel to data table and vice versa (with a step-by-step example) (8 Hours)			
<b>Module – 4</b>			
<b>Taking Control of the Controls:</b> Finding and attaching windows, Finding the control, Techniques for waiting for a control, Act on controls – mouse and keyboard activities, Working with UiExplorer, Handling events, Revisit recorder, Screen Scraping, When to			

<p>use OCR, Types of OCR available, How to use OCR, Avoiding typical failure points. (8 Hours)</p>
<p><b>Module - 5</b></p>
<p><b>Exception Handling, Debugging, and Logging:</b> Exception handling, Common exceptions and ways to handle them, Logging and taking screenshots, Debugging techniques, Collecting crash dumps, Error reporting. <b>Recap/Summary of the Course</b> (8 Hours)</p>
<p><b>Course Outcomes:</b></p> <p>CO1: Apply the robotic process automation knowledge to solve problems. CO2: Analyze RPA Scripts for different use cases. CO3: Interpret various aspects of debugging of RPA applications. CO4: Develop basic robots using UiPath Community Edition.</p>
<p><b>Assessment Patterns</b></p> <ul style="list-style-type: none"> <li>• <b>SEE</b> will be conducted for 100 marks.</li> <li>• Each full question is for 20 marks. (Answer five full questions out of 10 questions with intra modular choice). In every question, there will be a maximum of three sub-questions.</li> <li>• <b>CIE</b> will be announced prior to the commencement of the course.</li> <li>• 25 marks for test. Average of three tests will be taken.</li> <li>• 25 marks for Flexible Assessment Method.</li> </ul>

**M.TECH COMPUTER SCIENCE AND ENGINEERING**

Choice Based Credit System (CBCS)

SEMESTER – III

**Data Warehousing and Mining (3:0:0) 3**

(Effective from the academic year 2022-23)

Course Code	22MCS33D3	CIE Marks	50
Teaching Hours/Week (L:T:P)	3:0:0	SEE Marks	50
Total Number of Contact Hours	40	Exam Hours	3

**Course objectives:**

This course will enable students to:

1. Be familiar with mathematical foundations of data mining tools.
2. Understand and implement classical models and algorithms in data warehouses and data mining
3. Characterize the kinds of patterns that can be discovered by association rule mining, classification and clustering
4. Develop skills in selecting the appropriate data mining algorithms for solving practical problems. Optimize a query and basic concepts on transaction processing, concurrency control and recovery.

**Module - 1**

**Introduction:** Significance and Scope of the course, Importance of the course in societal, political and economic growth of the nation, Impact of the course on societal and ethical issues and career perspective

**Data warehouse:** Introduction to data ware house, difference between operational data base system and data warehouse, data ware house characteristics, DW architecture and its components, Data modelling, schema design, OLAP operations, OLAP server architecture.

(8 Hours)

**Module - 2**

**Introduction to Data Mining:** Introduction to data mining, KDD challenges , DM tasks, data pre-processing , data cleaning, dimensionality reduction, feature subset selection, data transformation.

(8 Hours)

**Module - 3**

**Association rules:** Problem definition, frequent item set generation, The Apriori principle, support and confidence measures, Association rule generation, the partition algorithms, FP-growth algorithms.

(8 Hours)

**Module - 4**

**Classification:** General approach to solving a classification problem, Evaluation of classifiers, Classification techniques, decision tree construction, Naïve-Bayes classifier, Bayesian belief networks, KNN classification algorithms and characteristics.

(8 Hours)

**Module - 5**

**Clustering:** Clustering overview, evaluation of clustering algorithms, partitioning clustering K-means algorithms, Hierarchical clustering algorithm, Key issues in hierarchical clustering strength and weakness, outlier detection.

**Recap/Summary:** Introduction to Data warehouse with different operational database systems, Introduction to Data Mining with Clustering, Classification and Association rule mining.

(8 Hours)

**Course Outcomes:** The students will be able to:

CO1: Understand the functionality of the various datamining and data warehousing component.

CO2: Appreciate the strengths and limitations of various data mining and data warehousing models.

CO3: Explain the analyzing techniques of various data.

CO4: Describe different methodologies used in datamining and data ware housing.

CO5: Compare different approaches of data warehousing and data mining with

**Question paper pattern:**

- **SEE** will be conducted for 100 marks.
- Each full question is for 20 marks. (Answer five full questions out of 10 questions with intra modular choice). In every question, there will be a maximum of three sub-questions.
- **CIE** will be announced prior to the commencement of the course.
- 25 marks for test. Average of three tests will be taken.
- 25 marks for Flexible Assessment Method.

**Textbooks:**

1. Jiawei Han, Micheline Kamber, Morgan Kaufmann, Data Mining-concepts and Techniques, Elsevier Publishers, 2017.
2. Paulraj Ponniah, Data Warehousing Fundamentals For It Professionals, 2Nd Ed, Willy, 2014.

<b>High Performance Computing (3:0:0) 3</b>			
(Effective from the academic year 2022-23)			
Course Code	22MCS33D4	CIE Marks	50
Teaching Hours/Week (L: T:P)	3:0:0	SEE Marks	50
Total Number of Contact Hours	40	Exam Hours	3
<b>Course Objectives:</b>			
This course will enable students to:			
<ol style="list-style-type: none"> <li>1. Review of the trends in computers and parallelism in computer architecture</li> <li>2. Familiarize the basic ideas of vector processing, multiprocessing and parallel operations</li> <li>3. Focus on performance of different processor architectures</li> <li>4. Review the advantages of thread level parallelism</li> <li>5. Expose to basics of Parallel programming.</li> </ol>			
<b>Module – 1</b>			
<b>Introduction:</b> Significance and Scope of the course, Importance of the course in societal, political and economic growth of the nation, Impact of the course on societal and ethical issues and career perspective.			
<b>Fundamentals of computer design</b>			
Introduction; Classes computers; Defining computer architecture; Trends in Technology. Trends in power in Integrated Circuits; Trends in cost; Dependability, Measuring, reporting and summarizing Performance attributes; Quantitative Principles of computer design.			
<b>Pipelining</b>			
Introduction, pipeline hazards, implementation of pipeline, what makes pipelining hard to implement.			
(8 Hours)			
<b>Module – 2</b>			
<b>Instruction level parallelism (ILP)</b>			
ILP basic concepts and challenges, basic compiler techniques for exposing ILP, reducing branch costs with prediction, overcoming data hazards with dynamic scheduling, hardware based speculation. Exploiting ILP using multiple issues and static scheduling, Exploring ILP using dynamic scheduling, multiple issue and speculation.			
<b>Multiprocessors and Thread level parallelism:</b>			
Introduction, Symmetric shared memory architectures; Performance of symmetric shared-memory multiprocessors, Distributed shared memory and directory-based coherence, Basics of synchronization, Models of memory consistency.			
(8 Hours)			
<b>Module – 3</b>			
<b>Memory hierarchy Design:</b>			
Eleven advanced optimizations of cache performance, memory technology and optimizations, Protection: virtual memory and virtual machines.			
<b>Speed up performance laws:</b> Amdhal's laws, Gustafson's laws, Memory Bound Speed up model			
(8 Hours)			
<b>Module – 4</b>			
<b>Data-Level Parallelism in Vector, SIMD, and GPU Architectures:</b> Introduction, Vector Architecture, SIMD Instruction Set Extensions for Multimedia, Graphics Processing Units, Detecting and Enhancing Loop-Level Parallelism, Mobile versus Server GPUs and Tesla			

versus Core i7.

(8 Hours)

### Module - 5

#### **Warehouse-Scale Computers to Exploit Request-Level and Data-Level Parallelism:**

Introduction, Programming Models and Workloads for Warehouse-Scale Computers, Computer Architecture of Warehouse-Scale Computers, Physical Infrastructure and Costs of Warehouse-Scale Computers, Cloud Computing: The Return of Utility Computing, Crosscutting Issues, Putting It All Together: A Google Warehouse-Scale Computer, Fallacies and Pitfalls

**Recap/ Summary:** Overview of the various levels of the parallelism in tightly coupled systems with focus on memory design and computing architectures.

(8 Hours)

**Course Outcomes:** The students will be able to:

- C01: Summarize the fundamentals of high-performance computing.
- C02: Demonstrate high performance computing concepts.
- C03: Apply parallel computing constructs in parallel programming.
- C04: Analyze the performance of different CPU architectures.

#### **Question paper pattern:**

- **SEE** will be conducted for 100 marks.
- Each full question is for 20 marks. (Answer five full questions out of 10 questions with intra modular choice). In every question, there will be a maximum of three sub-questions.
- **CIE** will be announced prior to the commencement of the course.
- 25 marks for test. Average of three tests will be taken.
- 25 marks for Flexible Assessment Method.

## M.TECH COMPUTER SCIENCE AND ENGINEERING

Choice Based Credit System (CBCS)

SEMESTER – III

### Project Phase 1 (0:0:0:8) 4

(Effective from the academic year 2022-23)

Course Code	22MCS34	CIE Marks	50
Teaching Hours/Week (L: T:P:PW)	0:0:0:6	SEE Marks	-
Total Number of Contact Hours	-	Exam Hours	-

**Preamble:** Project for PG students gives an opportunity to build upon learning gained in the earlier years, and to broaden the scope of understanding. Students are required to take complete ownership of their project, and this necessitates a considerable time and effort beyond the exercise of knowledge and skills. They must be self-regulating and self-directed in their time management. It is expected that the students use the wide range of knowledge and skills that they have gathered over the course of their post graduate program.

M.Tech Students are motivated to focus on projects related to the following area (Specialization):

- Computer Network Security.
- Artificial Intelligence
- Data Science

### Synopsis Phase (Review 1)

All project proposals (Synopsis) submitted must be approved by the Project Evaluation Committee (PEC). The role of PEC is to verify, approve and evaluate the projects submitted by students.

### Project Evaluation Committee (PEC)

The projects are evaluated by Project Evaluation Committee (PEC). The committee consists of HOD, guide and senior faculty members as shown in table below-

Name	Role
Head of Department, Dept. of CSE	Chairman
Senior Faculty-1	Member
Senior Faculty -2	Member
Senior Faculty -3	Member
Guide	Member

### Project Phase-1 (Review 2)

Project phase-1 is carried out for Six-weeks in 3<sup>rd</sup> semester. Students in consultation with the guide shall carry out literature survey to finalize the topic of Project. Phase 1 in 3<sup>rd</sup> Semester is allocated with 100 marks for Internal Assessment.

**Course Outcome:** The students will be able to:

**C05:** Identify and formulate the research problem

**C06:** Conduct literature survey on topics related to project

**C07:** Prepare quality document of project work for publications, patenting and final thesis.

**C08:** Design a methodology using advanced tools/techniques for solving the problem including project management and finances.

**C09:** Develop Analytical models, Perform Numerical Analysis and interpret the results.

<b>M.TECH COMPUTER SCIENCE AND ENGINEERING</b>			
Choice Based Credit System (CBCS)			
SEMESTER – III			
<b>Internship (0:0:0:12) 6</b>			
(Effective from the academic year 2022-23)			
Course Code	22MCSI36	CIE Marks	50
Teaching Hours/Week (L: T:P:PW)	0:0:0:12	SEE Marks	50
Total Number of Contact Hours	144	Exam Hours	3 hrs
<p><b>Preamble</b> All the students shall have to undergo mandatory internship of 6-8 weeks during the vacation of II and III semesters and /or II and III semesters. Those, who have not pursued /completed the internship, shall be declared as fail in internship course and have to complete the same during subsequent semester end examinations after satisfying the internship requirements.</p>			
<b>Details of the Internship</b>			
<p>The Industry Institute Interaction is accomplished through Internship training which is carried out in 3rd Semester. The students get exposure to corporate culture, atmosphere and work on real world projects. Experts from the Industry guide the students in these projects and in turn are evaluated by the Department Co-supervisors. This facilitates the engagement between the teaching faculty and Industry personnel.</p> <p>Each student undergoes an internship in the 3rd Semester as per the University norms. Internal and External evaluation will be done based on their performance. The students undergo Internship for 16 weeks as per University Norms. After completion of Internship, students submit a report to the Head of the Department with the approval of PG Coordinator, internal and external guides from the Industry.</p>			
<b>Assessments</b>			
<ul style="list-style-type: none"> <li>• There will be 50 marks for CIE (Seminar: 30, Internship report: 10) and</li> <li>• 50 marks for examination including Viva – Voce conducted during SEE.</li> </ul>			
<p><b>Course Outcome:</b> The students will be able to:</p> <p><b>C01:</b> Apply appropriate engineering principles and techniques to suit the needs and arrive at the feasible solution.</p> <p><b>C02:</b> Analyse a given engineering problem and showcase creative thinking ability</p> <p><b>C03:</b> Design a hardware/software prototypes or systems for real time applications.</p> <p><b>C04:</b> Present the results from the work comprehensively and write a report</p>			

# **SEMESTER - IV**

<b>M.TECH COMPUTER SCIENCE AND ENGINEERING</b>			
Choice Based Credit System (CBCS)			
SEMESTER – IV			
<b>Project Phase 2 (0:0:0:36) 18</b>			
(Effective from the academic year 2022-23)			
Course Code	22MCS41	CIE Marks	50
Teaching Hours/Week (L: T:P:PW)	0:0:0:18	SEE Marks	50
Total Number of Contact Hours	384	Exam Hours	3 hrs
<p><b>Preamble:</b> Project for PG students gives an opportunity to build upon learning gained in the earlier years, and to broaden the scope of understanding. Students are required to take complete ownership of their project, and this necessitates a considerable time and effort beyond the exercise of knowledge and skills. They must be self-regulating and self-directed in their time management. It is expected that the students use the wide range of knowledge and skills that they have gathered over the course of their post graduate program.</p> <p>M.Tech Students are motivated to focus on projects related to the following area (Specialization):</p> <ul style="list-style-type: none"> <li>➤ Computer Network Security.</li> <li>➤ Artificial Intelligence</li> <li>➤ Data Science</li> </ul>			
<b>Design Phase (Review 1)</b>			
<p>All students shall submit detailed presentation and report with chosen topic in 3<sup>rd</sup> semester. The presentation shall cover the design methodology, requirement analysis covering detailed functional and non-functional requirements. The design shall cover both high level and low-level design aspects of the system. The presentation shall be with PEC committee identified for the students in the previous semester. This shall be considered for 50% of the CIE marks allocated for the project phase 2.</p> <p>Students shall also present a paper in international conference relevant to the area of the project work for the literature work carried out in the last semester along with proposed method and /or shall prepare project application for patent filing.</p>			
<b>Project phase -2 (Review-2)</b>			
<p>All students shall submit the detailed presentation with demonstration of the project work. The student shall prepare to submit his/her experimental results in peer review high impact indexed journals or submit a patent application on the work carried out. A draft dissertation report will be submitted to PEC members prior to the presentation date. This review will be for 50% of the marks allocated to CIE. Corrections shall be suggested by guide, PEC member, PG Coordinator and HoD. After all corrections are made the student shall prepare to submit the final dissertation copy.</p>			
<b>Procedure for Submission</b>			
<p>The candidate should submit a soft copy (CD) of the dissertation work to the University. The CD should contain the entire Dissertation in monolithic form as a PDF file. The guide checks for the completeness of the report, plagiarism must be verified, and the similarity index must be less than 20%. The report will then be uploaded along with student details as prescribed in the form available on online dissertation evaluation portal. The guide submits a panel of four examiners for evaluation of dissertation which is been approved by the institution. Then institution will notify the date of conduction viva voce examination.</p>			

### **Final Examination**

Project evaluation and Viva-Voce examination shall be conducted in fourth (Final) semester.

- Internal Examiner carries out the evaluation for 100 marks.
- External Examiner carries out the evaluation for 100 marks.
- Average of both Internal and external examiner marks are considered as the final marks for project evaluation.
- Viva-Voce examination of Project work is conducted jointly by Internal and
- External examiner for 100 marks.

**Course Outcome:** The students will be able to:

**C01:** Identify and formulate the research problem

**C02:** Conduct literature survey on topics related to project

**C03:** Prepare quality document of project work for publications, patenting and final thesis.

**C04:** Design a methodology using advanced tools/techniques for solving the problem including project management and finances.

**C05:** Develop Analytical models, Perform Numerical Analysis and interpret the results.
